

Di Bawah Bendera Resolusi

Untuk Indonesia Raya

Kan kukatakan kepada rakyat Indonesia
tentang kepak sayap Garuda....
Kan kukatakan kepada Dunia tentang
komitmen Garuda....
dan Kan kukatakan kepada semua bangsa
tentang kebesaran bangsa Indonesia....
Negara Indonesia....
dan Dia adalah Sang Saka untuk perdamaian
dibawah Panji Resolusi Indonesia.

R.E Atmawijaya

OUR RESOLUTION PATH

A Spirit and an Indonesian Politics Manifestation,

in which:

Politics is a wisdom and an achievement to reach the peak of Human lives civilization…

- R. Atmawijaya -

THE RESOLUTION PATH FOR NEW INDONESIA

It is necessary to find an accurate solution, a solution that restores the prestige and dignity of the nation.

Indonesia is now in the phase of uncertainty, uncertain in the direction so that the problems in all sectors of the life of a nation arise. Therefore, it is necessary to find an accurate solution, a solution that restores the prestige and dignity of the nation, and in order to catch up in all living aspects. And as the way to realize this mandate of struggle, this mandate of dedication, JALAN RESOLUSI INDONESIA BARU (JARIIBU) -THE RESOLUTION PATH FOR NEW INDONESIA- is established.

JARIIBU is a new conception which will be the way and give comprehensive solution to all the nation's and country's problems, be it ideological problem, political problem, economical problem, social problem, cultural problem, etc. Those problems have always been in our thoughts; therefore, we are obligated to realize the ideals of the founders of Republic of Indonesia.

JARIIBU has political platform in accordance to the nature and character of Indonesia Nation which is Socio-Democracy, the political manifest is towards the sovereignty and the prosperity of Indonesia, be it the physical prosperity and spiritual prosperity of Indonesian people. This actually continues the ideals of the nation founders.

By the guidance of Allah, God Almighty, and through planned, structured and continuous efforts, we invite all the people of Indonesia, from Sabang to Merauke, from Miangas to Rote, to determine that the program of Jalan Resolusi Indonesia Baru is a political conception as the direction of the base for political struggle of the nation and people of Indonesia. Because of those abovementioned matters, we will be in MENDAKI (means TO CLIMB) together with JARIIBU towards INDONESIA MANUSIA SEJATI (THE TRUE GENUINE INDONESIAN PEOPLE).

POLITICAL MANIFEST

Political manifest for the future of Indonesia Nation which demands that prosperity is the right of all citizens, creating sense of security for every soul of Indonesian people, creating sense of security for the property of Indonesian people, and also preserving the dignity of Indonesia Nation. Then, a new dawn, a new hope, causes to emerge new ideas on the resolution for new Indonesia.

Resolution for new Indonesia we present is the way out with political ideology basis

that appreciates social diversity and different views in a great vessel called Jalan Resolusi Indonesia Baru (The Resolution Path for New Indonesia) that demands a political ideology understanding that focuses on dedication and comprehend that politic is the wisdom which accommodates all forms of imbalances and differences.

Jalan Resolusi Indonesia Baru is the realization of a fundamental essence, then needs the execution of a common goal: Menuju Kedaulatan dan Kemakmuran Indonesia (MENDAKI) - Towards The Sovereignty and Prosperity of Indonesia. Also, it is necessary to have a new awareness that Indonesia Nation is a nation which understands the will of the era.

In order to understand the will of the Indonesian People, a political objective have to be real, so a political manifest with a new natural way in line with the character and nature of Indonesia National. A political ideology that integrates with the universe support, a balance ideology platform, which is not sided either to the right or to the left, but focus on one political balance. And that political ideology is Harmonious Politic (nationalist, socialist and religious) - Pancasila Ideology.

Inspired by the founders of the nation, advices from teachers, statesman and senior military, and also the stakeholders in the Republic of Indonesia and discussed in joint meetings where the members of the meetings have a common goal, ideal and dedication, also based on the condition of Indonesia country that needs fundamental changes, then it is agreed to give birth to a Resolution Path for New Indonesia (Jalan Resolusi Indonesia Baru).

CLIMB INDONESIA

Salam MENDAKI !

From MENDAKI To IMANASI

The conception of JALAN RESOLUSI INDONESIA BARU for the Indonesian People, Indonesian Nation, the country of Republic of Indonesia.

The idea and act for the nationality with the theme “From MENDAKI To IMANASI - Under the Banner of Resolution” with

its goal to develop the Indonesian People to become the true genuine of Indonesian People.

The motherland is calling you ...

Greetings from MENDAKI “Menuju Kedaulatan dan Kemakmuran lndonesia” (Towards the Sovereignty and Prosperity of Indonesia)...

“and the struggle of Indonesian independence movement has arrived to the happiest moment of delivering the people of Indonesia to the gate of independence of the Country of Indonesia, which is independent, united, sovereign, just and prosperous “...so it is stated in the opening of the constitution 1945.

To achieve that noble ideal, the sacrifices from our heroes had been really great, full of tears and blood, but for 73 years of the independence of Republic Indonesia, that ideal and struggle has not been wholly and thoroughly realized.

It is for that reason JARIlBU is in presence with its goal of Indonesia Manusia Sejati (IMANASI)-The True Genuine of Indonesian People- and has amulets which are MENDAKI, GARDANAS and INANIA.

Amulet MENDAKI

Today, at this moment, and at this time my heart is melted. Melted to become one heart with my nation, Indonesia, since I was born from the womb of an Indonesian mother. This melted heart is united with my mind, united with my intention, confirming that it is the time for us, Indonesia Nation, to reach the stars in the sky and these are the years towards the Sovereignty and Prosperity...CLIMB (MENDAKI) Indonesia! CLIMB (MENDAKI) with Jalan Resolusi Indonesia Baru!

And with that resolved heart we can achieve big ideal which is the goal of the founders of Indonesia Nation. The goal is BERDIKARI (to be independent, self-reliant). And I absolutely believe that this united mind and sense is the same mind and sense of all the people who love this home country Indonesia, our homeland.

All of Indonesian People, who live in cities, villages, mountains, coasts, from Bengala Island to Merauke, from Miangas to Dana Island, also with our brothers among patriots who are now on duties as the state officials. But in this path, our path's name is not His Honor, Mr. Jokowi's path, is not Her Honor, Mrs. Megawati's path, is not His Honor Mr. Prabowo's path, is not His Honor Mr. Yudhoyono's path, is not His Honor Mr. Gatot Nurmantyo's path, is not His Honor Mr. Agus Wijoyo's path, is not His Honor Mr. Basuki Tjahaya Purnama's path, is not His Honor Mr. Bambang Susatyo's path, is not His Honor Mr. Amien Rais' path, is not His Honor Mr. Abdullah Mahmud Hendropriyono's path, is not His Honor Mr. Luhut Binsar Pandjaitan's path, is not His Honor Mr. Ali Ashat's path, and it is also not my path, Raden Atmawijaya....

Today our path's name is JALAN RESOLUSI INDONESIA BARU (The Resolution Path for New Indonesia) towards the TRUE INDONESIA...

This path is not Head of the State's path, is not the Minister's path, is not the Governor's path, is not the Regent's path, is not the Head of District's path, is not the Head of Village's path, is not the Businessman's path, is not the Trader's path, is not the Conglomerate's path, is not the Bachelor's path, is not the Professor's path, is not the Fisherman's path, is not the Farmer's path, is not the Go-Jek's path, is not the Reporter's path....

But at this moment, our path is OUR RESOLUTION PATH...

The Path of the Indonesian Patriots!

The Path of Indonesian Gatot Kaca!

The PATH of the Indonesia Nation!

This Jalan Resolusi Indonesia Baru (Resolution Path for New Indonesia) business is not only for this moment, but until the realization of MANUSIA INDONESIA SEJATI (THE TRUE GENUINE INDONESIAN PEOPLE) and it is not solely just political business, not just economical business, not just cultural matter, not just about military, but the it is the path to THE TRUE GENUINE INDONESIAN PEOPLE, the path TO THE SOVEREIGNTY AND PROSPERITY OF INDONESIA....and that is the actual independence path!

And Alhamdulillah, Thank God, indeed we must be grateful to God Almighty who has given all of us blessings and in this Resolution Path for New Indonesia (Jalan Resolusi Indonesia Baru) we worship His Greatness...Allahu Akbar...Allahu Akbar.... Allahu Akbar...!

At this moment, we - the Indonesia Nation - in unanimous determination, will make one great change towards prosperity and justice with more dignity and Indonesian nationalism spirit with the amulet The Resolution Path for New Indonesia (Jalan Resolusi Indonesia Baru) - From MENDAKI to IMANASI.

CLIMB, ALL THE PEOPLE OF INDONESIA!

Towards the Sovereignty and Prosperity of Indonesia

A common goal, and the goal is a political creation which programs are directed, measurable, detailed, as form of physical development goal for Indonesian People. MENDAKI Program is series of primary economical and determines the formulation of modern Indonesia with Garis Besar Haluan Negara (The State's Outline Direction), Rancangan Pembangunan Lima Tahun (Five Year Development Plan) in all sectors are the Future Indonesia Development Plan, The Resolution Path for New Indonesia with the objective to realize the takeoff which is the fair and civilized prosperity for all the people of Indonesia.

MENDAKI - to make the Indonesia a sovereign country in prosperity, has a function to observe and implement the agenda of life assurance for every citizens of Indonesia, implement the agenda of restoration in our resolution pathway in all sectors, particularly mental restoration, human skill restoration and economy improvement.

Realizing re-tooling to all the institutions by putting forward mutual respect, by establishing ideal fundamental with ethics and moral based on Pancasila and Undang-Undang Dasar 1945 (The Constitution 1945).

MEN-DAKI PRO-GRAM

MENDAKI PROGRAM

Our country is the largest archipelago country in the world which consists 17.508 islands and vast variety of ethnics and cultures. Total area is 5,193 million square kilometers (or 8,063 million square kilometer if includes ZEE), where 1.904 million square kilometer is the land area. Has tropical climate with average temperature of 21 – 33-degree Celsius. Population: 261 million people. Capital City: Jakarta. Total ethnics: 365 groups of ethnics and tribes. Total dialects: 583. Religions: 87,2% Islam, 9,9% Christian/Catholic, 1,7% Hindu, dan 0,7% Buddha. GDP US$ 1,074 trillion, with GDP US$ 4,116 per-head.

Geographical dimension of our country is located between the Asia Continent and Australia Continent and between the Pacific Ocean and Indian Ocean. The islands are inhabited by variety of ethnics with varied cultures and languages. The state's motto is "Bhinneka Tunggal Ika" (Unity in Diversity). The state's philosophy is PANCASILA.

PUTTING ASIDE PERSONAL INTERESTS.

As a country, Indonesia started slowly arising from its status of the Third World country in the beginning of 20th century, the country was developing towards becoming a modern country in 21st century. The process in becoming a modern country was not yet successful because of the monetary crisis struck. And that monetary crisis struck has been a specter until now. Nevertheless, we have faith that these issues can be solved in time with our new way.

Therefore, we invite and challenge Indonesian youth generations who are special and highly educated to act right now and start the change. This act also done by us for the people who do not have the education or experience to change their own fates. Now, it is time to put aside personal interests and start thinking about the bigger picture with the spirit of social solidarity.

INTER-NATIONS

It is really important to not ignore this mission and only take this as a hollow symbolic gesture - the impact of this act is an eternal commitment to the success of "NEW INDONESIA". A vehicle which will take active participation in assisting Indonesian People through the process of democracy and economic development. It is our intention will to make this "people-to-people" modeling bridge that will bridge Indonesian government, private sectors and the society and also inter-nations.

STRATEGIC CONTEXT

in Unity We Stand

MISSION

We are fully committed to expand and strengthen economic, cultural and educational relationship between the society and the government of Indonesia to achieve progress and prosperity together.

STRATEGY

To accomplish our mission, we make sure:

Comprehensiveness, Quality, Reliability, Relevance, and Accessibility, Practicality in all range of services we offer.

QUALITY POLICY

We are consistently in dedication to exceed our society ideals and we work unlike humans but this work is beyond humans.

OBJECTIVES AND ACTIVITIES:

ECONOMY

A. Source of income generation will be obtained through:

- Initiation of a new financial scheme for rural and small scales.
- Establishing Agricultural Enterprises scheme.
- Establishing an Excellent Trade and Distribution Centers for Indonesian made products.

Programs:

1. Rural and small scales financial scheme.
2. Rice Development Program.
3. Corn Development Program.
4. Small farmers welfare improvement.
5. Agribusiness Development Program.

B. Creating job opportunities will be obtained through:

- Mining and Energy Development.
- Agriculture and Fishery based industrial development.

Programs:

1. Refineries
2. Cement factories.
3. Heavy mineral sand (Zircon Concentrate)
4. Renewable energy sources/Geothermal.
5. Integrated agriculture industries.
6. Integrated fishery industries.
7. Sugar factories.
8. Corn and Rice industries.

C. Strengthening decentralization, will be obtained through:

- Strengthening the environment.
- Strengthening the infrastructures.

Programs:

1. Waste Management (Bio-organic Fertilizer factories)
2. Bio panels.
3. Telecommunication.
4. Airlines Development.
5. Development of Mass Rapid Transport (MRT).
6. Integrated maritime industries.
7. Tourism business development.

OBJECTIVES AND ACTIVITIES:

HUMANITARIAN

A. Increasing and improving the social welfare and social being, will be obtained through:

- Free education or at minimal cost up to college or university level.
- Affordable housing for low income people or the poor.

Programs:

1. Integrated education centers.
2. Rural and urban housing development.

C. Increasing and improving medical services, will be obtained through:

- Access to health and medical centers.
- Development of health insurance.

Programs:

1. International hospitals.
2. Health insurance programs.

RESOLUTION OF NATIONAL LAW - REHNASI

Humanitarian program in Law Enforcement involves in programs as follows:

1. Cooperate and consult with legal experts in regards to legal issues which arise in society's life.

5. Select qualified trainers and trainees to be recruited according to the goals of the programs to be achieved.
6. Establish joint training programs with interested parties (enterprises, workshops, government bodies, etc.).
7. Involve universities' experts and conduct monitoring program.

MENDAKI INDONESIA DIAGRAM

GARDANAS

Gerakan Kesadaran Nasional (National Awareness Movement)

To make "the world's administrator" mentality to become Indonesian mentality.

It is a great vessel that becomes the place to grow back and restore the essence of the true genuine of Indonesian people. Creating Indonesian personals who have the true soul of Indonesia so that the motherland children have faith with all their souls. The pride of being Indonesian is one great grace that should be grateful for and should be used as a basic thought to make "the world's administrator" mentality to become Indonesian mentality. Garda Nasional is the program which its primary agenda is the restored mentality to be the commander in revitalizing the Indonesian nationalism spirit. Garda Nasional aims to accomplish the strong country of Indonesia, have high dignity, and respectable. Garda Nasional has functions to implement and establish partnerships with all elements of the society at national as well as regional/ local level base on gotong royong (mutual cooperation). To revitalize the spirit of nationality and make JARIIBU as the solution. Apply and conduct efforts of enlightenment in regards to JARIIBU agenda in relation to the country and nation interests to all national elements.

1.1 Background

In the beginning of independence until mid-80s, Indonesia was recorded as one of the pioneers in Asia's industrial revival. The fundamentals of nationalism that were peaked during physical revolution and enriched in President Soekarno era, were well embodied through GBHN and REPELITA during President Soeharto era. To accelerate the national industry growth, beside creating various policies, the government also formed hundreds of BUMN (State Own Enterprises/SOE) as development agents. As the results, the national economy grew fast and became the center of attention and world example for regional and international.

Unfortunately, the fundamentals of national industry development that were created by the government mostly failed in the middle of the road because of the weaknesses in implementation of long-term rules and regulations, besides the fading of spirit in maintaining the direction of national industry development. The economic growth caused by the industrial growth succeeded in improving the people's standard of living to a better condition. Along with it, there was a significant increase in national consumption.

At this point, government and the people started to be careless on the importance of industrial and technology endurance which were supposed to better. Nationalism values started to fade and replaced by uncontrolled capitalistic culture of materialism.

In the condition of significantly increasing national consumption, the government loosen the spirit of national industry independency by establishing policies that were only benefiting certain circles. In result, the target of economic growth which was at first supported by the power of national industry, slowly shifted to the increasing people's consumption. The investments in-flow then were allocated mostly to the service and trade sector compared to the increasing production.

Nationalism values started to fade and replaced by uncontrolled capitalistic culture of materialism.

Inconsistency of the national industry development policy slowly had undermined the nation's life. The peak of this national industry deterioration finally happened through the economy crisis began in the middle of 1997. A weak economic fundamental of a nation is the main factor in the difficulty to escape from the economy crisis that hit us.

Several neighbor countries and some East Asia that are developed countries now, used to adopt the system that Indonesia made, with several fundamental modifications, so that the results are as planned. Automotive industry Proton in Malaysia is inspired by domestic automotive industry protection policy which is done in Indonesia. Also, primary industrial and trade regions in China are inspired by Batam region in Indonesia.

Now, we have become a very consumptive country. From the society's point of view, there has been an awful mental degradation, marked by the declining creativity and work productivity, added to that is the more consumptive materialistic lifestyle. From the entrepreneurs and industry point of view, weakened nationalism and social solidarity causes national entrepreneurs to do "short cut" most likely to gain "short term maximum profit". This condition is worsened by several government policies which are not firm in supporting the creation of a strong national industry. It is really concerning to face the reality of most national needs are obtained through imports or assembly products from foreign manufacturers.

A huge number of total populations cannot be financed by natural resources exploitation or relying to craft industry and low technology industry alone.

Negative penetration of globalization is strongly hitting the young generations now. Most awful impacts are the fading of nationalism and the declining of social concerns. In results, domestic market is more easily taken over by import products or assembly products. Moreover, some SOEs

and national private companies have been switched ownership to foreign investors just by the reason of privatization.

National industry marginalization phenomenon, that has been happening for quite a while, causes the difficulties for government to implement various national industry improvement programs because of the high number of unemployment and reduced national capital.

To overcome this very severe problem, it is time for the government, entrepreneurs, and all elements of the society to start massively, hand in hand, to empower all potentials available through a movement that has an incredible acceleration in redeveloping the national industry so we can catch up and also make this large number of population as a primary asset towards a national industry that is not only strong but also has to be superior compare to other countries.

Indonesia is a big country with land rich of natural resources. The number of populations is 261 million people which if empowered maximally will result in an extraordinary energy. China People Republic has proven this, the large number of populations is not an obstacle to economic improvement, but instead it will be an incredible asset for the industrial improvement.

If most of the natural resources that we own are utilized and managed efficiently with a touch of well technology, they will make an increasing additional value from time to time. And if these natural resources management (to gain maximal additional values) is done in Indonesia and by Indonesian people, we are indeed, unlikely to encounter significant problems in economy, social and cultural, politic and state defense.

To empower all potentials available
Through a movement that has
An incredible acceleration

1.2 The Rationale

The European economy improvement started through a big momentum which popularly called "The Industrial Revolution". The Industrial Revolution succeeded to take the European nations out of the darkness in Middle Ages. The economy of people was quickly shifted from fall behind agriculture sector to the superior industry sector. This quick alteration caused an incredible increase in the needs of raw materials. Besides, an abundant production needed a larger market. To expand the market of raw materials production industries, the European nations undergo area expansions to the entire world. To secure the distribution and raw materials fulfillment, European nations conduct violent ways of physical colonization's and occupation of the territories.

Indonesia, which was unfamiliar or untouched by technology, was easily conquered. Colonialism and occupation of the territory, that clearly had economic

motives, had been going on for a very long time, for hundreds of years.

Japan economy improvement started since "Meiji Restoration" which pioneered by Emperor Meiji when the Japanese seas were still in the Dutch isolation. Meiji managed to raise the people's nationalism and used domestic products. In results, Japan switched quickly from fall behind agricultural country to the most developed industrial country in Asia armed by nationalism and hard work and also strong government policies that were sided with people. Indonesia also gained a hard lesson form Japanese economy improvement, particularly in WW II era, through physical and economical colonialization. Until now, the Japanese government consistently maintaining the policies which sided with the people and its national industry, even though the people's economy has been well developed.

Some countries also conducted industrial revolution with remarkable results. South Korea is the newest evidence that loving and consuming national products make that country a strong new industrial country with character. Even though lack in natural resources, Korean industry managed to grow fast so that it became a developed country in a short time.

At first, Korean industrial manufactured products were underestimated by international consumers. Their products in international market were considered low price at that time because consumers doubted the quality of their products. But with total support from the people, entrepreneurs and the government, eventually Korea managed to create a superior industry and able to compete with products from other countries. And now, we can find products from Korean industry in every corner of our country.

What about ourselves? After 73 years of physically independence, the goal of independence, which was desired by the predecessors, the initiators and the founders of this country, is even further away from expectation.

The nation's economic independence is getting far and worse, caused by low number of the society's production and lag in industrial technology mastery. Economy production pattern is still dominated by conventional and traditional economic sectors, meanwhile the people's mindset is in the process of ignorance of being consumptive, materialistic and individualistic.

In reality, right now, we are experiencing colonialization in different form from the traditional colonialism. Neo colonialism and the new style of imperialism, that were feared during Bung Karno era, eventually been happening in the motherland. Almost every sector of economy and industry are now controlled and owned by foreigners.

In the era of the New Order, the government prioritized the economic growth as indicator of the development progress. Mastery of Science and Technology to the

government was considered to come by itself as foreign investment increased. However, that good intention from foreign investors awaited by the government through technology transfer never came, even though for that reason the government had provided various facilities and investment facilitations.

What happened was vice versa, Indonesia which was the fourth largest population in the world and had good political stabilization at that time, was just being a market for the products from the investor countries. Investments that came in were allocated to service sectors which fulfill the people's consumptions. There have been industrial and technological crisis and worse is the confident crisis of this nation that needs to be overcome, and this cannot be done by the government alone but needs to involve all parties, including

entrepreneurs and the society, hand in hand simultaneously through the consensus of national industry revival.

From various experiences in the past, it may be concluded that there will never be transfer of technology from one country to another voluntarily, because this related to the strategic value of the technology. Technology is the most powerful economical tool for a country to survive and develop. Technology also the primary tool in the state's defense, besides being a strong bargaining tool in the international political associations.

Generally, developed countries are countries lacking of natural resources. We have abundant natural resources, which if managed by ourselves through industrial superiority and high nationalism spirit will result in products with extraordinary economical values.

Which means, it needs to be aware that the pattern and production type cannot be relied on raw materials from nature alone, but needs to be revolutionized and quickly switched towards products with maximal process level, superior, as well as highly competitive against foreign products.

It is time for huge domestic market, with total population of 261 million people, is controlled by local products, unlike what has been happening now, where domestic market is really controlled by foreigners. And it is time for national companies, besides reclaim the domestic market, to also be able to spread their wings and compete in international market.

Borrowing the terminology from Professor Johannes Surya "MESTAKUNG" (Semesta Mendukung) - means "The Universe Supports", now is the time for this nation to start strategic steps with full speed towards the improvement of national technology.

"Strong supports from all parties are a hope for the growth of national industry, particularly the government, industrialists, technocrats, scholars and society at large in strong efforts, measurable and continuously to propagandize, campaign, and prioritize the national industry products....

anytime and anywhere....

LET'S BUILD THE SOUL OF GARDANAS INDONESIA!

In The Indonesia National Awareness Movement.

National Industry Resolution

From geographical location point of view, Indonesia positioned in between two continents, which is Asia and Australia and at the same time in the middle of two continents, the Pacific and Hindi's. An extremely strategic position, in addition, our national waters should play its role as a crucial hub between Europe, Africa, some part of Asia and east Asia and along the east and southern pacific. Could have been easily define us as the Main player and able to achieve maximum benefits in economy, politics and worlds security.

But the unfortunate bitter truth happened otherwise, we receive pressure from the countries of these regions in multiple areas. In economic perspective, we still unable to utilize this crucial advantage of our geographical position. Our economic had dire dependence towards the regionals and international causing us at the bottom part of bargaining in many fields.

By "exporting" millions of our workers as low labor workers to the neighboring countries and other regions, showed clearly how weak our national economic are.

From the politics side, defense and security, ever since the start of the economic crisis, the government received surmounting amount of pressures either from the neighboring region or international upon the matters which supposedly a simple domestic issue. This much dependent on these regions causing us to be helpless in defending our national interests within it. The illegal takings of our Sands and Forests at our foremost region committed by our neighbors has been an easy discovery with clear evident. Moreover, our border, between the Indonesian and few neighboring countries has been reported with several issues and disturbances. The core root on these problems laid crystal clear on how weak our national industry has been, along with our great dependent to the international world.

To handles such issues, there's never been such a right timing to initiate our national industries in order to absorb huge number of workers, at the same time it functions as a strong fortress in facing the many maneuvers and outside threats. It is a strong push and urgencies from all layers of society to ignite the national industrial revolution. The energies of such urge need to be channeled into the right target in a form of Industrial Resolution.

Etymologically, resolution is a statute and this statute solution required energy through many material processes. To magnify the effect and strength momentum of the resolution, it needed quite a relatively large with extreme speed, in order to create super large energy. To resurrect the national industries, required an extreme super large energy and continuity to solve the basic matters with hindering character.

Therefore, the needs of a super large resolution momentum to push through the national economy movement to reach the independent dignity is crucial. "National Industrial Resolution" are meant to synergize the whole components and nation's child to achieve sole opinion regarding the repairment, progressivity and sustainability of the future national industry, and even more essentials, as an ignition acceleration to regain the national industries baton stick.

Momentum is the climax of an impulse processing. In order for the national industries resurrection momentum to gain large force, also required a timing for the huge start acceleration, besides, at the same time, maintaining the energy that comes out of it through continuedly digest the fast pace changes. It means, the Resolution moment alone is not enough to move the national industrial and economy, henceforth it is compulsory to be followed by a speedy support through progressive's sustainable government programs.

National Industrial Resolution is truly the beginning of a snow ball process to the resurrection of the national economy. To enlarge the positive effects, arouse from this momentum, required the creation of new policies from the government, also the changes of the previous policies with a hindering nature to the advancement of the national industries to be hasten after the strategic solutions discovered.

For those very reason reparations is a must and changes in all line of government with the same purpose and target, and that is the glory of the nation and country through industrial and technological advancement. Along with the spirit of national industrial resolution, it is expected that significant reparation and changes in the mindset and working ability of the government bureaucracy engines, societies and business people's, with the benchmark of national interest.

The year of National Industrial Resolution

Basically, in all layers of society already in dire needs of a fast pace of nation economic advancement. The needs of this significant changes occurred because of the landslide in the people's life qualities, while in other nations happened the opposite with such significant economic growth. The buried energy in a form of expecting a change are rapidly growing and urgently in need of a release into action, these releasing of such massive energy and significant positive meaning, required a simultaneous movement between the government and the peoples as a synergy form of nation's strength.

Looking back in the past where the government at age of new ordo reigned, government owned such concept in building the national economy for longer term that has more direction. The basic concept of development poured down in GBHN and REPELITA. The weakness at that era laid at the basic implementation of government policy, which is the government Laws and Regulations with so many soft points. As a result, the well-designed development couldn't reach the target in its implementation.

The government at the reformation era has also applied partial policy to push forward the industrial sector. Nevertheless, the issues have grown in such enormous size, then it required same amount of effort and steps to initiate the movement and bring glory to the national industry.

We will not be able to achieve the purpose if only having the ability as a professional, as technocrat, as businessman, if it's not hand in hand with a strong Indonesian soul. (National character building).

The following are the actual core root issues:

- The hindering of the society psychology in a form of degradation values of patriotism and nationalism, also participation and lower value in appreciating the nation's products.
- Slow reaction of policies and response and still within the nature partial coming from the government in developing the national economy with industrial basis.
- Weak in law enforcement and poor performance of bureaucracy. These points have been happening for more than 40 years without the proper handling; as a result the hope of the peoples has grown thinner for any repair and positive changes as a life of a nation.
- The existence of many individual and group in creating the national industrial policy. The consequences any policy determined always has many flaws only to benefit certain group. The effects of this type of group will only give the opportunity of foreign interference to enter and influence government policy making, and most definitely it is for the sake of their national economy interest.
- Education and policy related with education still unable to focus and sided to the national interest, especially those related with industrial manipulation and technology. Education is the main tool in technology acquirement. It is completely impossible achievement such features without the proper education. Until this moment there are no correlation between the national education policy and the direction of industrial growth and national technology advancement.
- The consumptive life style has been prosperous indirectly through national growth economy that forces to put more weight to the increment of society consumption just to reach the target that was set. In long term, these practices will just worsen the economics of the society because the national capital is being reduced constantly.

Early step, reference, and political certainty within the processing of the national industrial resolution moment at the same time to gives the early efforts bringing the nation economy. The emotional resurrection of the people in loving the national industrial products are the utmost highest capital for the nation economic development.

Through the national industrial resolution let us realized our delayed ancestor dreams. Let us manifest the nation pride that once lost to regrown once more, with the spirit and hard work, at the same time to prioritize national products in every opportunity.

GARDANAS FOR PROSOLUTION

We will not be able to achieve the purpose if only having the ability as a professional, as technocrat, as businessman, if it's not hand in hand with a strong Indonesian soul (national character building).

And GARDANAS are the tools to achieve the true Indonesian nationalism because the true Indonesian nationalism are a true internationalism character as an inspiration, which is the character to reach the eternal world peace and support that every nation owned the rights of freedom as stated in the opening of UUD 1945.

THE PEAK OF INDONESIAN GLORY - IMANASI

The Genuine Indonesian Being

Hi Indonesian Youths, how many are you?

Say that we are one...then steady you hear. March your footsteps. And whenever you're in despair because of the relentless storm in the ocean of life...return to the rail of the revolution...there you'll discover the way back to the path of revolution.

Those invitation from President Soekarno for a pathway to revolution, and today, at this moment, implementation of those invitation are the Indonesian resolution, for the reason of us to be patriotic is no longer takes us uphold the purpose and inside the new Indonesia resolution path with two pillars as a the amulet, therefore the very purpose of the Indonesian people is to be wealthy physically and spiritually...the perfect human being...the genuine being...and the genuine Indonesia being is the whole form of human consciousness , knows its rights and obligations...aware of the function as a social being that only know not to think about self-fulfillment but being present to established relation among humans, among the tribes, among the races, among the religions, and among the nations within the State of Kertagama.

IMANASI is an ideology toward life's purity and IMANASI is conception brought present to reach life's criteria. IMANASI would be the final achievement from grand purpose of the new Indonesian Resolution Path. These are the goals of Indonesian founders which said the Madani society.... the dreaming society. The state of Kertagama... gemah ripah loh jinawi tata tentram kerta raharja...Glory be to God...Glory be to God... MERDEKA!! FREEDOM!!

INANIA

Indonesia and the World

At the political order that wills national political stability, there won't ever be Indonesia as great nations can apart or isolate itself from the international politics association. The Indonesian nation fells the need and truly have the will to place itself within the dynamics of the world politics. To establish the Indonesia politics hegemony as the main stream of policy in the order of the international world. And within the brand-new realm of politics, a major conception where the world peace became the target, the presentation to the international society a concept with a name INANIA. With purpose to finally achieve the mandate where freedom is the rights for all nations, and any colonialization upon this world must be wipe out as its not according to the human rights and justice rights.

To establish the Indonesia politics hegemony as the main stream of policy in the order of the international world

1. INANIA (Indonesia and the world) have the role to create a new world order with peace and justice.

2. INANIA has the functions:

    - Applying the cooperation steps towards bilateral even multilateral. Along with the new Indonesia paradigm by emphasizing on: that Indonesian nation is a nation have the understanding of the world needs whether through cooperation in defenses, security, economy, all aspects related the needs of all.
    - To rebuild the existence initiated by the Great Leaders of the Republic of Indonesia in its sincerity to build the Asian-African relation and other nations that has been well sustain till this moment.
    - The Non-Block movement has become the undisturbed benchmark to the free active Indonesia's politics and will be sustain in form true sovereignty towards the world peace.
    - The world economy restoration is a consensus supposedly understood by the whole world citizen by maintaining the market balance, monetary balance, fiscal balance, and also balances regarding the monopoly settings and way over the line communal perception.
    - The ideology of the Indonesian Politics Harmony is a political concept with the nature of solution in order to bridge the politic deadlocks happened in the world.

JARDINIA

The Path of Indonesia Resolution to The World

The perfection of Indonesia supposes to gives a huge magnitude effect in its role to mix with the world. The role of Indonesia with its perfection internationally will bring impact to the other nations investing within it. It does give a huge influence to the prosperity level of other nations in the world that collaborated with Indonesia in economy. The level of the world society prosperity peaked out several years ago. Those kinds of prosperity level never before been achieved in the history of mankind. Although admittedly those prosperities left some social gap issues between nations, between territory and between individual. The situation we are facing at the moment has change where world economy is decelerating. Even to some other nations they are experiencing a negative growth. This led to the worrisome of huge economic crisis will occur. The weakened of global economy brings out panic and gives an impact to political constellation internally even nation among each other to shift. The difficulties in economy condition birthed various conflicts in many parts of the worlds including the armed conflict. Lengthy armed conflicts birth the social tragedy of humanity and force the human migration inter nation even continents. In one side faced by humanity responsibility but other side fear of culture clash will birth another social issue.

THE CURRENT CHALLENGE OF INDONESIA

The current challenge of Indonesia and in the future is completely unequal with the world at the past time. There has been a drastic change where conflict is no longer of ideology background but more to economy conflict. The rise of economy conflict is believed widely cause by the limitation of the natural resources while the population grow rapidly in other words the limited natural support to sustain human life's on earth. The main trigger of the conflict is the limited natural resources, energy, food and water.

In the ideal concept way thinking, the natural resources is limitless. The main trigger birthed the conflict is actually not because of the limited resources but instead the faulty concept of thinking originated from a wrong assumption and give birth to the wrong belief that natural resources is finite. The belief of limited resources shackled the human mind set to start exploring others resource and performs technological innovation to increase the efficiency resource empowerment and values added.

If the resources are limited, a major question should arouse, how could it possible for the modern human generation able to sustain the life on earth for centuries until this very moment. This kind of ideal way of mind set is more appropriate to the global society condition without knowing any nations limitation, size/norm and thoughts.

OUR NEW PARADIGM

Many initiatives have been applied to settled conflicts, unfortunately the truth unable to provide any permanent solution, the nature of it is only temporary. Therefore, required a more basic conflicts settlement that earned to be the principal in the inter nation connectivity in order to create much better new world order, a better world, a peaceful, secure, fair and prosperous or in other words a social justice world society.

The mindset of a limited resources has birthed an individualism character and closed nature either personally or in groups, birth out an anarchy acts to control the resources through territorial annexation even through eradicating unjust cooperation agreement for the purpose of controlling the said resources without any realization that many more other resources being sacrificed.

The mindset upon unlimited resources will push the society to more open for cooperation, shoulder to shoulder, need of one another. Will give birth to a society without boasting any differences, stay apart from conflict and united the similarity/advancement to achieve the same purpose, answer to the same challenge.

The belief of finite resources is not all faulty as well. On the certain condition the belief of finite resources is rightful when the resources are ease of reach, ease of exploration which definitely gives high value of economy for its limitation. The synthesis of both mindsets will birth out a new paradigm "with the unlimited ability of human mind and unlimited effort will enable the discoveries of new resources enough in fulfilling the needs. Even though the resources are infinite but the users must be wise and fulfilling with the justice principalities.

The world society has grown weary with various kinds of conflict and future uncertainty, the fate of the next generation. With perception equation and the new paradigm implementation in inter world society relationship, the achievement of a new world order of civil social justice will be achieved. In order for the new paradigm to be realize and working effectively, it must base on a principal of "mutual understanding, mutual respect, mutual benefit". The opponent of these new paradigm would be the mutual enemy and be left behind from the world society relation.

Therefore, required a strategy in develop the mutual synergy between nations. THE INDONESIA RESOLUTION PATH in this matter INANIA has the strategy INDONESIA RESOLUTION PATH FOR THE WORLD in short JARDINIA with the following strategy implementation:

1. THE PACIFIC RING OF FIRE COMMUNITY

Indonesia is giant island nation located at the pacific ring of fire. Those rings are the volcanic ring truly alive, where it is able to give the color to all aspects of lives such as tradition, culture, politics, economy, social, defenses, security, and many others. Such unique position of Indonesia eventually makes Indonesia to be in full perfection and bestowed comparative advancement in almost all aspect of lives. These perfections are formed in such rich diversities, gives the perfect identity as a nation. Strength, Agility, Greatness, Resourcefulness and the beauty of those volcanoes given some kind soul to the Indonesian nation.

The pacific ring of fire surrounds the Pacific Ocean stretch from the west coast of American continent until the east shores of Asian continent, from the north pole until the south pole. Several lands across are the Andes mountains (Chile and Bolivia), Central America, North America (Mexico, United States, Canada) Russia, Japan, Philippines, Indonesia, New Zealand and the artic. These countries crossed over by the ring of fire has huge potential, farming potential, energy, minerals, cum plasma richness, tourism and many others to the point it has the potential similarities with Indonesia and extremely lucrative to be incorporated alltogether.

The nations within the pacific ring of fire have contributed enormously towards the world economy. These nations in average has high GDP, and highly and strong influence in the world politics. Over 70% of the world economy cycles is within the nations located in the pacific ring of fire territory. Therefore, developing a strategic cooperation by establishing the world ring of fire community is a compulsory. The world ring of fire community is those nations where its territories are within the line of these volcanic mountains.

2. STRATEGIC NETWORK ALLIANCE

It's a must for Indonesia to build the alliance network with the countries with many supremacies in plenty sectors. The superiority required in accordance to the realization and execution of Indonesia national programs.

The nations within this strategic alliance fulfill the criteria needed form Indonesia in accordance with its national interest, those criteria are as follows :

1. The advancement in state management system and government with a role within international political scene.
2. A nation advances in ocean sector either in general industry or defense industry.
3. Having the top advancement in basic knowledge research and lead in earth exploration and energy industry.
4. A nation with at the minimum has high in economy and GDP.
5. A nation with abilities in managing the biological resources either in the land or on the ocean to optimize the nature resourcefulness.
6. Has the ability in advance technology of industrial processing from raw material to be a valuable raw resource with high value.
7. Has the lead in the machinery world, chemical industry, pharmaceutical industry, biological modification, doctors, electricity, telecommunication and other industry required high precision.
8. Nations with no affiliation, in the military, politically, and economically, to any nations, therefore with its neutrality able to act objectively in solving the international problematic issues.

To realize the new paradigm and the hope to reach the world society with social justice, Indonesia should form a strategic alliance. This strategic alliance is a platform of communication between the main actors in fields of economy, humanity social culture and human resource development, research and technology of its nation members. On the next stage development, if it deemed necessary the cooperation might be upgrade to become a strategic inter nation. In a long term it is expected these strategic alliances able to be the ideal model adaptable to other nations within the cooperation between other nations.

3. GLOBAL NETWORK ALLIANCE

Economically Indonesia is group of G20 nation and nation with the largest economy in ASEAN. A Country with a Gross Domestic Product (GDP) Purchasing Power Parity (PPP) ranked 7th in the world, the largest sector is Services followed by manufacturer and agriculture. The Indonesian export dominated by raw materials and basic materials. While on the export side mainly is to fulfill the demand of finished materials and high technology productions equipment's.

As one of the largest democracy countries' in the world, Indonesia

has an active role in the scene of the world politics with a benchmark of active and free in the foreign politics policy. As implemented at the active involvement of Indonesia in the United Nations. Indonesian known as the initiator of the Non-Block Movement (Non-Aligned Movement) consisting of 114 countries. The non-block movement initiated by the signing the Dasa Sila Bandung in Asia Africa conference on the year of 1955. Indonesia as well a nation's birthed ASEAN consisting of 10 member's nations. As the biggest Muslim country in the world, Indonesia actively participate at OKI's (Islam Conference Organization) activities total membership reaching up to 57 countries.

Therefore, performing intention and activation of Indonesia's role within the mentioned organizations needed to be done. To fight for political harmony ideology internationally. Political Harmony Ideology is a form of Indonesia initiation internationally, it is a political conception with a nature of providing a solution to bridge the political deadlocks occurring in the international world in these decades. To be as the world's managers is inevitability for

Indonesia being. Simply because Indonesia has such superpower ability to do so.

Develop a harmony relationship with all nations and use active and freedom as the based for its foreign politics is a compulsory. Indonesia must have the role in the establishment foreign relationship impactful to national interest which is:

- Defense and Security functions, related to this matter is to protect the whole nation and lands of Indonesia.
- Economical functions to accelerate the public prosperity.
- Social and culture function, to educate the lives of the nation.
- Political function, as formulated in the sentence to participate the world's order based on freedom, eternal peace and social justice.

And the four items mentioned above as statutes in the preamble of 1945 amendment also the very national purpose of the Indonesian Nation.

THE NEW PATH OF INDONESIAN RESOLUTION has a new dictum INDONESIA PATH RESOLUTION FOR THE WORLD in short JARDINIA. In which Indonesia will take on more active role to play its part within the world nation relations.

OUR RESOLUTION PATH MOMENTUM
-JAREK-

"Our resolution path momentum – JAREK" agenda are meant to level the vision, mission and realization of the whole nation's components on the upmost importance the controlling of industrial and technology in maintaining the nation and country existence in this globalization era.

The purposes of the agenda are:

- To re inspire and revitalize the spirit of nationalism in all nations component to be more sided, use, and love the products of its own nation.
- Resurrect the once bottom pit nations dignity.
- Mapped out all the results achieved by industrial sectors, either BUMN (Government Corp) or private, in controlling the industrial and technology. The achieved result will be a reflection and base benchmark to all parties in determining the next step.
- To increase the nation product application as capital merchandises or even consumption goods.
- Revitalize the real industrial sector, especially to increase the national industry fighting capability in facing global competition.
- Revitalize the spirit of domestic investment, especially to the national businessman. The best effort in handling the jobs availability and poverty is to increase the investment in the real sector industry.
- Provide the platform for suggestions and opinions from all sides which then propose as Our Resolution Pathway in order to repair the national industry performances.
- Together with the society and all elements redesign the direction and national industry goals through speedy policy, accurate and with a long-term nature.
- In order to face and lead the international competition the increment of national industry is inevitable.

With the completion of "Our Resolution Pathway Momentum – JAREK" may the spirit and soul of the nation recover speedily, the society purchasing interest to local products increase significantly, same time the real sector investment acceleration may occur, especially within the domestic industry.

OUR PATH RESOLUTION

MOMENTUM – JAREK activities agenda

The activities agenda that will support Our Pathway Resolution Momentum – JAREK divided in several stages. Each activity is interconnected towards one and the other and it is an inseparable part.

The activities will be commencing are as follow:

1. OUR RESOLUTION PATH PROSOLUTION – JAREK.
2. The National Culture and Music Industry Resolution Momentum.
3. Retrace back the independence in maintaining the independence.
4. Applied technology innovation and National Industry Resolution Momentum.
5. Chemical, Machineries and Metallurgy Industrial Resolution Momentum.
6. Information Technology and Computer, Telecommunication, Electronics, and Electricity industrials Resolution Momentum.
7. Defenses, Aviation, shipping, Automotive Industrial Resolution Momentum.
8. Fisheries, Farming, Agriculture Industrial Resolution Momentum.
9. Infrastructure and Financial Industries Resolution Momentum.

1. OUR RESOLUTION PATH PROSOLUTION – JAREK

The summit agenda of the activities will be held in the PROSOLUTION OUR RESOLUTION PATHWAY – JAREK. This agenda is a proclamation agenda to whole Indonesian people the time has arrive for this nation to rise from the bottom and start to embrace the industrial control and technology in mass way. This proclamation also serve as announcement and warning to Indonesian nations it is to put the hands sleeve up in repairing the dignities, in order to overtake the technology a voluntarily transfer is impossible, only through the relentless struggles, and with controlling the industry and technology there won't be any of this nations child be tortured and insulted where ever they may be.

Through this INDUSTRIAL RESOLUTION MOMENTUM, we proclaim that THE PATHWAY OF THE INDONESIA RESOLUTION is OUR RESOLUTION PATHWAY UNDER THE BANNER OF RESOLUTION!

PROSOLUTION

We indonesian nation, truly with sincere and holy intention deliver to the whole people of indonesia from benggala island to merauke from miangas to dana island to proceed with the new indonesian pathway resolution (jariibu) in all out determination to the sovereignity and prosperity of indonesia to become the true indonesia being. By the holy politics philosophy within the mind, the words and the deeds. Loyal till the very end in the faithfulness as the true being of indonesia mans

May The Almigty God give us his permission

Jakarta, May 15th, 2018

R. Atmawijaya

2. THE NATIONAL CULTURE AND MUSIC INDUSTRY RESOLUTION MOMENTUM

The intention of the national culture and music industry resolution momentum is as an enlightenment propaganda vehicle to the society on the needs to resurrect, love and possess the national industry. It is done simply because music is a powerful vehicle and familiar in approaching the whole level of society, especially the young generation. Through this agenda, it is expected:

- The societies are more familiar and able to differentiate between the industry and product of the national and the foreign
- Appreciation will be occurred and the speedy increment in the consumption of the national industrial products
- Strengthen the nationalism of the country
- Expanding national music industry, while stimulating and accelerating globalization of Indonesian music
- Making Improvement in art and culture to fix the constitution to provide better protection in national music and culture industry

3. CIVILIZATION RETRACEMENT AND THE FIGHT FOR THE INDEPENDENCE OF INDONESIA BEING, THE INDONESIA NATION, THE COUNTRY OF REPUBLIC OF INDONESIA

The laxing of nationalism will endangered the independent and identity of the nation. What worrying is the breaking of historical chain, as well as the loss of national historical moments from minds of the youth. It is time for us to be in the same notion that Indonesia is in a new form of colonialism and its almost pointing to traditional colonialism through physical exploitation.

The moments of those fights and struggles need to be actualized to refresh the memory of the youth on how extreme the difficulties of the forefathers in overtaking and defending the independence, for the purpose of freedom and prosperity of the next generation. The youths need to continuously be consciously reminded in order to gain and maintain the independence required hard work and with full of spirit.

These agenda expect the growth of a brand-new consciousness on the essence of freedom is not just limited to the physical colonialism, for the very reason that any form of co-

lonialism owned the same motives, which is the overtaking of natural resources and markets only to their products. The essence of this agenda is through the toughened of national industry, our nations may avoid the greater danger of colonialism, a soft industry and weak defenses of a nations will cause the rise of another colonialism.

4. THE MOMENTUM OF NATIONAL INDUSTRIAL RESOLUTION AND APPLIED TECHNOLOGY INOVATION.

More than just another commercialization, the main purpose of this agenda is the substantial national industrial resurrection. The national industrial category is an industry with a minimum capital of 60% owned by the national businessman. The minimum local content of 20% for manufacturing and national trademark is an absolute. These criteria are required to clarify the percentage achievement able to be controlled by the national industry, in the industry and market control, either domestically or export wise.

The momentum of national Industrial Resolution Agenda and applied technology innovations purposes are:

- Mapping out all the achievements in the national industry field.
- As a benchmark, including in the education world and national businessman circles in the order of future national industry development.
- As a facility to arise the national proudness of its own products. Required the relentless extra efforts to resurrect the unrecovered national spirit total after the storm of economy bankruptcy and monetary crisis hits the nation.

The applied technology areas participated in the momentum of National Industrial Resolution and Innovations and Applied Technologies agendas are as follows:

- Machineries and Automotive Technology
- Electronics and Current Electronics
- Telecommunications
- Chemical and pharmacies
- Electrical and Current Electronics
- Robotics and Instrumentation
- Agricultures and Harvest processing technology
- Fisheries and Fish processing Technology

- Shipping Technology
- Alternative Renewable Energy Technology
- Medical and Public Health Technology
- Computing, Informatics and Multimedia Technology
- Aviation and Space Technology
- Applied Physics
- Forestry and Forestry Product Utilization Technology
- Environmental health Technology and Waste Processing Technology
- Civil Technology, Seismicity and Volcanoes

Every area in this agenda is an effort to justify that science and technology is a requirement and is the most effective weapon for the continuity, resiliency, and defense of the nation against globalization as well as penetration and annexation efforts from other nations.

It is known that the percentage of expert or educated labor in science and technology in our country is, so imbalance compared to labor in other fields. These imbalances make an impact on lowering the abilities to absorb technology or engineering. Besides, our labors that works in science and technology does not have the quality and skills that can keep up with the advancement in science and technology itself. This was caused by lack of synchronization between national interest, education curriculum, and the needs of national industries.

The percentage of engineer in Japan reaches 36% from all its graduates, meanwhile in Indonesia the number only reach 4% from all graduates. Large scale awareness of technical engineering and applied technology is needed in the general public and among students, so they will have the interested in the fields of science and technology. It is hoped that this agenda will increase the percentage of people who would be interested and eager to work in the fields of science and technology.

5. THE RESOLUTION MOMENTUM OF BASE METALS, MACHINERY AND CHEMICAL INDUSTRY.

Base metals, machinery, and chemical industries is more categorized as a capital goods and raw material industry. This sector holds an important role to control other sector, since it is the number one tool in the process of advanced industry. Base metals industry also holds an important role in national infrastructure and property development.

Base metals industry is closely related to metallurgy and metal treatment process so its produces product we desired. We have several base metal processing industry and experts in this field. However, presently our machinery and finished goods industry imports majority of the raw material for its manufacturing process because the low production and quality of local products. The growing dependency makes our finished goods industry less competitive against foreign industry, due to the higher cost for production. To handle the high cost of production business's use the conventional way of lowering the worker wages.

Although the situation won't last long. Wages reduction bring a direct impact on the decrease of productivity. As the result the production cost is unable to be pressed significantly. What happen instead is the increased of production cost caused by low quality and workforce performance as well as the soaring unexpected cost, and poor infrastructure.

Higher production cost brings a negative impact for the competitiveness of national industry. Thousands of factories are out of business or forced to reduce their employees to increase efficiency. Base metal industry is extremely crucial for the continuity of this nation, because it is the base for every other national industry. Which mean, without complete mastery of the industry it will be impossible for this nation to improve its industry.

Besides base metal industry sector, machinery industry is also closely related to production process of others industry. Machine Is the main production tool in the production processes. Machine also act as a mean to lower the production cost and to improve a product.

At this point the national machinery industry isn't capable to meet the needs of domestic industries. Other factors are the lack of information and appreciation to domestic ma-

chinery product also contribute to lower output of domestic machinery. In respond of the poor output of machinery products, finished product industry use the conventional way by lowering the worker wages. As the result slowly but surely, national industry products become less and less competitive. Market liberation also increased the burden that domestic industries have to bear.

Similar with base metal industry and machinery industry, chemical industry also holds a vital role in other industry progresses. The use of tools and materials obtained from chemical processes is expanding in industrial sector as well as public lives. Chemical industry is closely related with synthetic materials, tools, as well as raw materials for further processes in finished goods industry. Chemical industry required a relatively high investment in term of tools supply. Because most of the tools used are imported product, a decrease in production capacity brings a harmful effect to domestic chemical industry. Investment burden and debts, makes it harder for national chemical industry.

We have an abundance natural resources that can be processed into industry raw material or capital goods. Part of the problem is the poor quality of the Indonesian human resources in making capital goods and raw goods industry. As well as a weak constitution and regulation for regulating and protecting domestic industry.

The Resolution Momentum of Base Metals, Machinery, Chemical industry as intended:

- To spark the interest of everyone involved and for public to prioritize the use of national industrial product
- To elevate the excitement of students, researcher, and practitioner in national industry in mastering the use of newest technology in this industry. At the same it's also expected to increase interest in engineering tremendously

6. RESOLUTION MOMENTUM IN ELECTRICITY, ELECTRONIC, COMMUNICATION, COMPUTING, and INFORMATICS

Electricity has been a number one necessity in every aspect in life. The development in electricity has advanced to the point where its envelopes every part of human life. Electronics is a product of advancement in electricity, the same as communication technology, computers and informatics. In the future, the use of electricity knowl-

edge will be the dominant player in the world economy.

Until this moment, Indonesia don't have a lot to say in the progress of electric technology. As a whole we are still limited only as a user or consumer in electric technology. From this national industry resolution momentum is expected that supporting electrical industry will develop quickly so that it can reach the growing national need and can be use as strategy in national defense.

It's the same with the fields of electronics, communication, computer, and informatics industry. These industries are capital/ labor intensive industry therefore, to achieve the target of national independency, these industry needs more skilled and educated experts in the field while cooperating with every party involved.

7. AUTOMOTIVE, SHIPPING, AVIATION AND DEFENSE INDUSTRY RESOLUTION MOMENTUM.

The national automotive industry is a industry that left behind in an era where the international automotive industry is in a tight competition. Even though the automotive industry can be used as a symbol of pride and glory of a nation and not just economical based. Compared to the automotive industry, the locomotive industry is in worse condition, in developed countries the train is a cheap mass transport system, so it's always developed for efficiency of the country economy, industries, and people, unfortunately, the opposite is happening in Indonesia. Whereas, the locomotive industry is a integral part in production process. Therefore, we must repair and upgrade in every aspect of that field to buff national economy.

Shipping industry is an industry that still survives until this moment, although still unable to receive a significant result considering our territory consists of mostly sea. Water transportation should be the first choice in national transportation industry. It is required to master the shipping industry considering the vast water territory of Indonesia and the ginormous economical value that follows, and above all the advancement in the shipping industry itself will strengthen national defense.

The aviation industry sector is at its highest moment right now; sadly it is not followed by a rapid growth of domestic flight equipment industry. It is more apparent with the national space sector, its almost untouched by the national industry. The main

player in the national space industry, LAPAN (National Space Agency), is still unable to do much in the development of space technology. National space is extremely important because it is related to economic, social, cultural, and national defenses. Space have a diverse use that can be beneficial in every aspect among them is climate and weather detection for different need, mining and mineral potential, as tool for surveying and accurate mapping, mean of fast, accurate, and safe communication, as well as national defense Most of the national space equipment we used is still using foreign products. Same with the information on national space that we can't process our self must be bought from companies or other countries at a very expensive price.

The defense industry also experiencing the same problem. The government is still relying on imports to supply equipment for the national defense. To acquire this equipment the government must pay a large amount of payment, while political nuance accompanying the procurement and utilization of the acquired equipment. A substantial action in everything we can to make our own defensive equipment and reducing our dependency of foreign products, as to the function of national defense is irreplaceable for the continuity of the nation.

8. RESOLUTION MOMENTUM OF AGRICULTURAL, LIVESTOCK AND FISHERIES INDUSTRY

Agriculture holds the primary role to fulfill national primary need. There is a saying if Indonesian nation is an agrarian country, however this is not what really happen in reality since the development in the agriculture sector is slower than public consumption. Even if we once were self-sufficient on rice for a brief period. To fulfill our national primary need we import rice and other comestible in large quantity. From year to year there's no significant improvement on the quantity and quality of national agricultural product. The life of farmers also did not improve, even though agricultural industry is a strategic industry for food sustainability.

Venture in livestock sector is also not yet becoming an important sector for the economy in the eyes of the public or entrepreneur. Most of the people even some practitioner still think that this business can be done as a side job. Because the business itself isn't taken seriously especially the production cost and the products it produced is not experiencing any improvement. As the result, there is no significant

improvement in national livestock product, and we forced to import cattle and other products to cover national food supply shortage.

Such is the case with fisheries industry sector. Three-quarter of Indonesian territory is made up of water, therefore the abundant potential for fishery and the yield from sea is so substantial if done correctly. Efforts have been done to improve the condition of Indonesian fisherman but there's no meaningful result. Limitations in capital become the reason of low living standard for the fisherman. Cruising range of our fisherman is seriously limited due to the limitation of the equipment, even some fisherman can only operate in shallow water with a relative fishing time. The potential of Indonesian water is enjoyed by foreign fisherman who fished illegally instead.

From the entire problem above, we can conclude it is the time to make total improvement in agricultural, livestock, and fisheries sector immediately.

9. BANKING SERVICE AND INFRASTRUCTURE RESOLUTION MOMENTUM

In the early 90's, the national banking is growing rapidly pushed by the banking deregulation policy. National banks grow quickly in number; however, it is still a part of Private Corporation, therefore the policy the bank used always related to its corporate plan. Economic growth that focused on consumer sector at that time caused the banking liquidity used in the same sector. Because of the ties with its corporate parents, there's a lot of deviation while distributing bank credits.

In the reality, we found that missuses of bank credits are the number one cause of the never-ending crisis in Indonesia. It's necessary to realize that distribution for real sector is exceedingly needed compared to consumer credits. Various regulation that stand for the growth of real sector is needed, especially that related to production sector.

Infrastructure is the foundation for production industry and the economy of a country. Due to those reason, to increase the competitiveness of national economy, a well, sturdy, and comprehensive infrastructure is required. Being left behind in infrastructure development

clearly causing a decrease in national economic competitiveness. In other word, if we want to strive the national industry resolution it must and absolutely be supported with the development of various supporting infrastructure so every program planned can be achieve well.

CLOSURE

Indonesia Resolution are the lamentation remedy to the Indonesian Revolution goals. And the New Indonesian Resolution Pathway are the great creation of Indonesian momentous generation. Therefore, it's an absolute for him to walk through and running towards the purposes. We love peace and loves the freedom. And may this pathway be the pathway to future generation and the gift of life by the grace of God will be recorded at the Court of History

stated Indonesia as the nation who creates history.

Akhirul Qalam, May the Almighty Allah bless us all.

To Indonesian Nation, Indonesian Peoples,

Country of Indonesia, Indonesia Homeland.

R. Atmawijaya

THE FLAMING FIRE OF RESOLUTION

Indonesia Resolution are the lamentation remedy to the Indonesian Revolution goals

- R. Atmawijaya -

" For more than half century we're colonized by the Political understanding...translated so cruelly...so dark...full of deceit, full of false accusation...nevertheless, when the intelligence of my mind, your mind, our mind sourced to the knowledge with the fullness of wisdom...the repent of its meaning and purpose growth prosperously...and truly Politics are the art to live...for leadership...for wisdom...and in a politics with full of civilization...yes Politics truly holy..."

- R. Atmawijaya -

"DISTRUST...here are the nations and patriotic reality of recent era, an era REPUTEDLY AS FREEDOM...the one REPUTEDLY as the caretaker of its nation continuing the fight of Ir. Soekarno...the one REPUTEDLY AS PANCASILAIS...were REPUTEDLY AS HUMANIS.... the truth lies in reality. We were run over by ridiculous capitalism... with an opinion Indonesian Peoples were given the CAKE by these peoples...AMAZING...TRULY REMARKABLE...whereas a human exploitation above another human happened...and here are the achievement"

- R. Atmawijaya -

"Plentiful of my generations frustrated, skeptical and pessimistic lest Indonesia will transformed to the realm of prosperity...to the realm of advancement and to the realm of sovereignty...and forgotten have they realize if they were victim of absent choice except what is plated...and it's ironic, for it will be inherit to grandchildren's...therefore, to my generation owned the opportunity to create a changes toward the true Indonesia human being...wealthy physically and spiritually. Come, together into the New Indonesia Resolution Pathway and favor our brothers a way out from that pessimistic and skeptical nuisances...as no other path except for to CLIMB altogether with JARIIBU towards IMANASI."

- R. Atmawijaya -

No other words worthy for Indonesia peoples except the word MENDAKI

- R. Atmawijaya -

" My dearest Indonesia, the earth motherland...I'm longing your sweet smiles and beautiful laugh....I long for the people shout of joy at your dwelling place and proceed with a solid belief of this nations household will create me, we , him and us to reach the true Indonesia Being and becoming shifting aspiration of a fair and civil world."

- R. Atmawijaya -

"My dearest Indonesian, tragical condition decorated the face of nation...bloodshed hurt earth motherland...the arrogance of egoism invades as of water hyacinth above the lake of nation and patriotic lives... concerned...truly concerning. The repent of these tragic fates, the repent of these patriotic lives, birthed and presented the Resolution Path...and him are the bond to this household of lives within the Indonesia dwelling place"

- R. Atmawijaya -

"Oh my whole Indonesian bloodshed, if you may remain dreaming of a fair justice nation and civilize...if you may dare dreamt of a social justice Indonesian...AWAKE... !!ARISE...!!...! together with JARIIBU lets us realized the dream."

- T. Mirza Muharsah -

A nation state...not its uniform lest understood diversity. Indonesia uniforms are but one island, one nation and one language.

- R. Atmawijaya -

"Hey Indonesian youths, your intellect like a bullet penetrate through limits, your belief are the pillars fortressed the goals and MENDAKI spirits are the stockpile of the giants conquerors soul and truly you owned the victory for its not yours to owned but those poor world creatures."

- R. Atmawijaya -

"Hi Indonesian Youths, large are your goals not just an empty whispered...not just an magical dreams...him are the soul portrayal...him are the manifestation of thunderous rise ocean..and truly...the life's originality are its words..."

- R. Atmawijaya -

"Hi the Youths of Indonesia! The great goals, the great work...a compulsory by law to aligned with such a remarkable mind resulting award masterpiece for its great nations...THE GREAT INDONESIA!!"

- R. Atmawijaya -

PROGRAM MENDAKI INDONESIA

INPUT
Indonesian Projects
Underlying Transaction

INDONESIA

The Biggest Archipelagic Country on Earth with more than 17,500 islands and variety of ethnicities and cultures.

- The width of area is 1,904,000 square kilometers.
- Land Area is 1,010,443 square kilometers.
- Climate is tropical.
- Average temperature: 21^{o} - 33^{o} C.
- Number of people is 260 million.
- Capital City: Jakarta (population 9.3 million).
- Number of ethnicities, 365 ethnic and tribal groups.
- Religion: 87% Moslem, 9% Christian, 2% Hindu.
- GDP US$ 67 billion; GDP per head US$ 550.

GEOGRAPHICAL DIMENSION

Located between Asian and Australian continents,
and between Pacific and Atlantic Oceans.
The islands are inhibited by many tribes with
cultures and languages.
The Country motto is BHINEKA TUNGGAL IKA (Unity in Diversity)
The State Philosophy is PANCASILA (Five Principles)

SELF-INTEREST
At All Cost

As a country, Indonesia is slowly raising it self out of Third World status.
We have faith that these issues will be addressed in time.

However,

WE CHALLENGE

the educated and privileged generation of Indonesia youth to take steps now to begin making a difference for their countrymen, who do not have the education or experience to change their own destinies.

It is time to set aside "SELF-INTEREST At All Cost" and start thinking about the bigger picture.

PEOPLE
to PEOPLE

It is imperative that this mission not be regarded as merely a hollow symbolic gesture, this impact will be an enduring commitment to the success of a "NEW INDONESIA".

The very vehicle that will take an active role in assisting Indonesia people through its democratic process and economic development.
It is our intention that it will be that model of "People to People" bridge, which will bridge among Indonesian government, private sectors, and community as well as among nations.

STRATEGY CONTEXT....

IN UNITY WE STAND

OUR MISSION

We commit

to extend and strengthen the economic,

cultural and educational relationship

between the people

and Government of Indonesia

to attain mutual

prosperity and growth.

OUR STRATEGY

To achieve our mission, we ensure:

Comprehensiveness,

Quality and Reliability,

Relevance and Accessibility,

Practicality

in the range of service

we offer.

OUR QUALITY POLICY

We are dedicated to

consistantly exceed

the expectation of

our people

OBJECTIVES AND ACTIVITIES

ECONOMIC

1. Generating of Income

It would be achieved through:	Programs/Projects
▪ Initiating new small-scale and rural financing scheme ▪ Establishing Corporate Farming scheme ▪ Establishing the state of the art "Trading and Distribution House/Center" of Indonesian made products	1. Small-scale and Rural Financing Scheme 2. Rice Development Program 3. Corn Development Program 4. Smallholders Prosperity Improvement Program 5. Agribusiness Development Program

2. Creating Job Opportunity

It would be achieved through:	Programs/Projects
▪ Developing Mining and Energy and rural financing scheme	6. Refinery 7. Cement Factory
▪ Establishing Corporate Farming scheme	8. Heavy Mineral Sand (Zircon Concentrate) 9. Renewable/Geothermal Power Plant
▪ Developing Agro and Fishery -Based Industries	10. Integrated Fishery Industry 11. Integrated Agriculture 12. Sugar Factory 13. Corn industry

ECONOMIC

3. Strengthening Decentralization

It would be achieved through:	Programs/Projects
▪ Strengthening Environment	14. Waste Management (Bio-Organic Fertilizer Factory)
	15. Bio Panels
▪ Strengthening Infrastructure	16. Telecomunication
	17. Airline Development
	18. Fast Train Development/ Mass Rapid Transport
	19. Integrated Maritime Industry
	20. Tourism and Business Development

OBJECTIVES AND ACTIVITIES

HUMANITARIAN

1. Better and Advance Social Welfare, and Social Being

It would be achieved through:	Programs/Projects
▪ Accessing to Education at minimal or no-cost	21. Integrated Education Center
▪ Affordable Housing for low income and poor	22. City and Rural Housing Development

HUMANITARIAN

2. Better and Advance Health Service

It would be achieved through:	Programs/Projects
▪ Accessing to Health and Medical Center	23. International Hospital (Bio-Organic Fertilizer
▪ Developing Health Insurance	24. Health Insurance Program

PROGRAM/PROJECT IMPLEMENTATION

THE ROLE OF INTERESTING PARTIES

THE MAIN ROLE OF INTERESTING PARTIES

UNION BANK OF SWITZERLAND (EXTERNAL FINANCIAL RESOURCE)	INDONESIA MAGNA ENERGI CAPITAL (LOCAL FINANCIAL INSTITUTION)	INDONESIA MAGNA ENERGI (APPOINTED BODY)
▪ Accomplish agreements with Appointed Body and Local Financial Institutions (LFI) as channeling body ▪ Recieve and evaluate Monitoring Reports from Appointed Body ▪ Monitor the implementation of the projects	▪ Receive and channel funds from EFR ▪ Recieve Approval projects to be financed from Appointed Body ▪ Provide Disbursement Reports and Funds Positions to the Appointed Body	▪ Establish agreements with External Financial Resource (EFR) and Local Financial Institutions (LFI) ▪ Accomplish the selection of potential projects/programs that have direct impacts on society improvements ▪ Accomplish tight coordination with EFR and LFI ▪ Conduct advisory services and monitoring upon the approval projects/programs ▪ Prepare periodic Monitoring Reports submit to EFR

LAW ENFORCEMENT Program

Humanitarian Program in Law Enforcement involves the following Programs

1.	Work and consult with legal expertise regarding legal issues risen from society's life.
2.	Provide legal advice to Legislative Body as legal input to accomplish business law and human rights.
3.	Provide legal education to the society with regard to give respect to the written laws and simultaneously enforce the sovereignty of laws to human being.
4.	Work with Judicative Body and Law Enforcers in providing legal issues within society so as to enforce law in all respects.
5.	Provide beneficial inputs to Local Government (Regional Autonomy) in order to accomplish Regional Regulation (PERDA) that should ini line with current business issues and the Laws.
6.	Work with Universities' Experts and conduct monitoring program.

ENVIRONMENTAL Program

Environmental Program in Humanitarian Program involves the following Programs

1.	Accomplish integrated Environmental Program by focusing on mining industries and other industries which produce heavy pollution (air, water, tropical forest and smell) and tailings. Setting up NGOs to encourage the law enforcement regarding environmental issues.
2.	Involve Non-Government Organizations (NGO) to monitor and take action of all pollution produced by industries and other causes.
3.	Involve Universities' experts in the environmental programs.
4.	Consult with and invite world pollution with regard to lessening pollution and environmental awareness program among industrial and mining society, government agencies and common people.
5.	Work with and accomplish coordination with Legislative Body and other influencing bodies to encourage and enhance pollution watch so as to create clear environmental condition.
6.	Continous monitoring and evaluation environmental issues.

HEALTH
Program

Humanitarian Program in Health involves the following Programs

1.	Accomplish public Health Programs in all villages, Regencies and Provinces with the stress to the Poor including tele-medicine.
2.	Build "PUSKESMAS" and "Class D or C" hospitals within all remote villages (areas) with very low (subsidized) cost of machines and physicians and obtain overseas grants.
3.	Accomplish health insurance programs for the poor and all citizens accomplish strategic alliance with world class insurance companies.
4.	Establish clean and health environments by realizing clean and neat rivers, lakes, creeks, harbours and beaches and sanitation systems.
5.	Coordinate with experts and other resources for more medical aids and physicians (doctor) to be involved in remote villages at the minimum costs.
6.	Establish anti-pandemic programs in all areas.
7.	Conduct Monitoring Programs and involve Universities Experts.

FORMAL EDUCATIONAL Program

Formal Educational Programs in Indonesian Humanitarian Program will focus on the following

1.	Establish "WAJIB SEKOLAH" program for all children and teenagers in the country as the 'basic' program (under age of 18) including school buildings development and the related necessary equipment.
2.	Accomplish subsidized tuition costs for the basic program and provide 'free tuition costs' program for the poor within cities and villages.
3.	Accomplish coordination with experts and other resources to provide teachers and expertise instructors at minimum costs to improve the quality of education and the welfare of the teachers.
4.	Build as many primary, secondary and high schools as possible within villages across the country.
5.	Maintain and increase the quality of education and involve Universities' expertise on continuous basis.
6.	Conduct Monitoring Programs.

VOCATIONAL TRAINING Program

Vocational Training Programs in Indonesian Humanitarian Program will focus on the following

1.	Accomplish as many vocational programs as possible in many technical trainings so as to create skilled labors.
2.	Build vocational training program centers in many villages and coordinate with technical experts from both domestic and over seas.
3.	Coordination with expertise to procure required machinery, tools, and equipment in the vocational training programs.
4.	Focus the applicable programs and prepare the trainees for job creations and create added value for skilled labors focusing on women and children sustaining complementary products.
5.	Select qualified trainers and trainees to be recruited according the goals of the programs to be achieved.
6.	Establish joint training programs with interested parties (enter prises, workshops, Government bodies, etc).
7.	Involve Universities' expert and conduct monitoring programs.

NEW INDONESIA

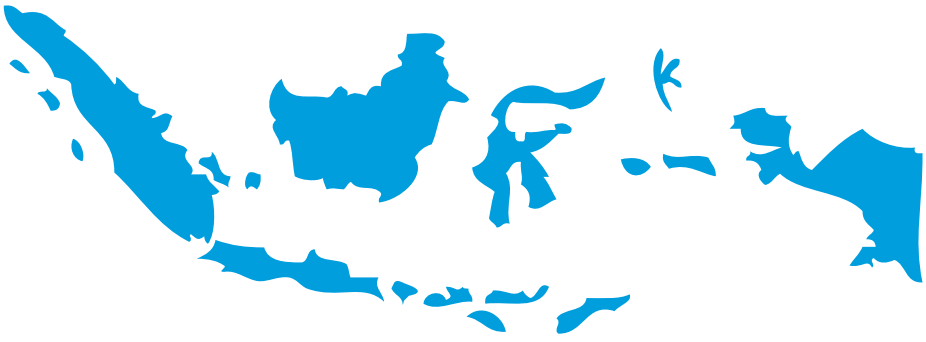

Embrace for Changes

- JARI IBU – Better World for us ALL !
- Social justice, fair and sustainable and enviromentally friendly and Profitable for all Citizens.

Unity in Diversity

- A sustainable economic growth for all Indonesias, including specially those left behind, the heart of our plan.
- Diversity is something we celebrate and want to protect, so will not exclude anyone. All Indonesians, any social status, are our brother and sister with position of true equality.

Indonesia is a place in the world as the great earth garden. Indonesia are the caretakers of the paradise.

NEW ECONOMICS PERSPECTIVE

Roles of the market

- JARI IBU-Internal Citizen first policy-us ALL!
- Improve lives of Indonesian Citizen is the focus.
  The economic growth will be sustainable.

Building from the Bottom up

- A sustainable economic growth for all Indonesians Citizen is the Foundation.
- Improve lives of Indonesian Citizen is the focus.
  The economic growth will be sustainable.

Market decision – Bottom up !

Market Decision

1. The economy belongs to everyone, and should benefit everyone, and should benefit everyone.
2. All citizens should have equal opportunity to grow and develop.
3. Investments in the economy should be made from a Social Impact perspective.
4. Economic actions should combine both public and private sector best practise.
5. The purpose of the economy should be to eliminate poverty and inequality.
6. The economy should be sustainable, profitable, and not ruin our planet.
7. The economy should be highly efficient and operating in a harmonious.

OUR NATURAL RESOURCES

Indonesia is a place of great earth garden

Indonesia are the caretakers of the paradise

- Yet, we a small country, produced 10% of the world waste with toxics to the garden.

Food, Farm & Fisheries

- 40% Indonesians are in Agriculture Industries and with the most inefficient, under funded in the world
- Yet, Producer price is going down while retail prices for individual citizens are increasing!
- Seasonal surge yet retail prices for individual citizens are increasing quickly. Seasonal surge-pricing is a regular feature, primarily due to insufficient crop planning, inefficient distribution, and lack of proper management at local government level.

National monopoly positions

Mafia-style local administration are:

- Benefiting a very small minorty of well-connected middle-men.
- Punishing the large majority of small-time farmers and all the citizens of Indonesia who are purchasing their produce.

A lack of education, and a focus on driving profits

- Which includes a tendency to do things the cheapest way, Rather than the best way.
- Have resulted in critical levels of deforestation, soil degradation, and pollution.
- Bombs are used as ‘blast fishing’ method. It destroys the surrounding ecosystem, and needs to stop.

OUR NATURAL RESOURCES

A lack of proper storage, poor logistical infrastructure

For new solution for Indonesia's economy

- To strengthen and grow in a sustainable way, of equal benefit to all, a new pathway must be implemented.
- We want to go back to traditional agriculture and fishing methods, but complement these techniques with the use of modern technology which does no harm to humanity or our natural environment.
- We want to empower our farmers to produce quality, healthy food products without destroying our planet.

Harnest Science and Technology

- With Smart ICT Technology, we will make it
  1. easier, cheaper,
  2. much more efficient and of course more profitable
  3. Ease for Indonesia's financial institutons to provide financial service such as credit facilities and insurance, to:

     - The farmers and fishermen and women
     - Who desperately need it in order to grow and
     - Contribute more to the Indonesia economy,
     - Helping it to grow.

OUR NATURAL RESOURCES

Harnest Science and Technology

- It already exists, it just needs to be deployed in the right place, to the right people, in the right way.
- Not so long ago, “new technology” meant advances in industrial machinery – expensive components and facilities ehich resulted in a business case for sweeping economies of scale, centralising production and processing plants.
- Now, the new technology is software based – cheap, easily scaleable, simple to use, and if implemented correctly, a fantastic provider of equal opportunity. The agricultural sector is a prime candidate for reform – and can benefit hugely from sensible implementation of modern technology.

Harnest Science and Technology

- It is now possible to educate anyone, anywhere, using the inter net and integrated Cloud Based applications for smartphones.
- Cloud Based Techniques for boosting crop yields, information on what types of crops are best suited to certain geographic regions, and information on pricing can be quickly distributed to those who need it.
- Rather than relying on a disparate, unfair, and repressive distribution network to get produce from rural individual farmers to retailers and exporters, modern technology allows us to replicate the same best practices used by large national and international companies – specifically the use of the futures markets for commodities – and provide the same benefits and assurances to small producers as enjoyed by large producers.

OUR NATURAL RESOURCES

Harnest Science and Technology

- A national Cloud based “agriculture app”, showing the market pricing for different agricultural products in different regional markets, along with an educational support hub to help farmers maximise value, would help
    1. to rebalance the agricultural sector – not just in terms of a fairer distribution to all involved in the sector, but also
    2. to manage national supply and demand, as farmers can at any time check the future value of any crop, and plan accordingly.

Harnest Science and Technology

- The Cloud Based Applications result would be
  1. a reduction in the price gap between farmers dan individual food-consuming citizens
  2. raising income for farmers through increased productivity, yet
  3. reducing prices for citizens through increased market efficiencies – as well as a reduction in supply volatility, a higher crop quality,
  4. increase tax revenues (firstly through increasing economic activity, and secondly through the automatic tax calculation and collection which could be integrated to the "agriculture app"
  5. foundation from which to grow exports to other countries.
- Technology, combine with education, will help Indonesia to implemet integrated planning, seeding, harvesting, distribution and storage.

OUR NATURAL RESOURCES

Manage our Natural Resources

- Our natural resources – all the natural resources of Indonesia – are assets which belongs to all the people of Indonesia. They need to be managed and utilised in a sustainable manner, in a way that protects and preserves the environment for future generations of Indonesians.
- In addition to protecting the environment, we also need to protect the citizen who work in our mines, oilfields, and forestry sites. Many employees in the sector are looked after well, but many others are overworked, underpaid, and badly mistreated. This needs to change.

Waste and recycling

- Reducing the amount of waste that we produce, and being more careful about how we dispose of it, will have a significant positive impact on both the environment.
- Compliance with worlwide movement to Reduce, Reuse, and Recycle waste -as opposed to simply dumping it somewhere on our land in our ocean.
- To fix this, one of the most elemantary – and yet highly effective – ways to do this, is simply to make it possible: provide the facilities for sorting and recycling waste, to give people the opportunity to recycle.
- In addition, education the opulation – both in terms of the dangers and cost of handling waste badly, and the benefits of handling it well-will help to reverse the current trend of the Earth being ruined.

OUR NATURAL RESOURCES

Green and Smart City

- Green and Smart City project to transform Indonesia into a modern, enviromentally-friendly, susatinable city.
- Smart Government, International Airport, the associated infrastructure, transportation, and commercial developments provide the opportunity for Indonesia and the world towards a brighter, healthier, more sustainable future which benefits all.

NEW ENERGY INFRASTRUCTURE

Engine of Growth for Indonesia.

Focus on Green and Natural A bundace of Resources of the Garden.

Currently,

- Indonesia exports a lot of unrefined oil, but imports refined petroleum products. When global oil prices rise, Indonesia's poor are hit the hardest as their fuel bills increase. When prices fall, the government loses significant revenues and scales back its spending – often hitting the poorest in society again.
- It's a lose-lose situation for the poor, and holds them back from fully contributing to growth of the Indonesian economy.

NEW ENERGY INFRASTRUCTURE

Currently,

- By some estimates, Indonesia's poor spend more than 50% of their total income on energy.3In developed economies, this figure is closer to 5% - for the poorest in those countries. Our aim in this regard is two-fold: help those in need to increase their income, and help everyone in the country reduce their energy bill.
- The current situation is keeping Indonesian citizen in poverty. Despite numerous efforts by government, NGOs, and international development partners, only relatively small improvements have been made. We need a new plan to fix this problem and make energy poverty a thing of the past.

Green and Natural Resources,

- Geothermal
- Natural Gas
- Bio Wastes
- Wind, Solar, Fuel Cells.
- Nedol coal liquification process : Coal to Liquid with Clean Tech from US
- Non-Conventional (Shale Oil and Fracturing M)
- Etc,

NEW FINANCIAL INFRASTRUCTURE

- Indonesia's financial system is still underdeveloped and a long way from benefing all of Indonesia's citizens. The latest official figures show that despite Indonesia's populatin of 285 million people, there are only around 100 million bank accounts
- Additionally, the average number of accounts per person is 2.5, meaning that only around 40 million people – around 15% of the population – actually have direct access to banking services.
- Microfinance has bridged some of this gap, but it is only one part of the banking system, and still a relatively small industry when compared to the potential market size
- The banking and finance sector in Indonesia is riddled with efficiencies, yet is highly profitable – but this profit is not "trickling down" to the most in need of financial system support.

Integrated Approach

- The financial organs – banks, insurance companies, investment funds, microfinance and other lending institutions
- Money is the blood which keeps the financial system alive
- Indonesia's geography, economy, and diverse population with $ status, present significant challenges to the sector.
- A "profit first" mentality -which works in a country where everyone is wealthy enough, To be of benefit to the people o Indonesia, and to grow the Indonesian economy, we need to put the people first -and profit second.
- The model of integrated approach, efficiently connecting all areas of the financial organs & sectors into a functional framework which maximises value creation, and ensure that everyone benefits from it.

NEW FINANCIAL INFRASTRUCTURE

Integrated Approach

- By integrating the provision of credit with the other areas of the program -access to knowledge and education, insurance, products which will help boost crop yields etc
- We can build Indonesia's economy from the bottom up, helping those most in need of help to drive economic growth for themselves and for the whole country.

Integrated Approach

The financial organs-BanK: Micro Financing

- Access to credit -for poor entrepreneurial activities
- Currently are primarily funded thru savings, or more frequently, via loans from family members and friends. Most are cash-based, not registered for tax (and not registered for anything at all, in most cases), and have pretty much no prospect of expansion due to a lack of capital.
- Microfinance businesses and its distribution network is (1) often a long chain of people, each needing to take a cut for their work, (2) interest rates are often very high (3) This takes money away from the people who need it most, whilst supporting a chain of middlemen who add no economic value.

NEW FINANCIAL INFRASTRUCTURE

Integrated Approach

The financial organs-Bank - Micro Financing

- Microfinance sector in Indonesia is still functional, and still helping many small businesses to prosper.
- It just needs to be expanded, and made more efficient. Interconnectivity to other areas of finance are therefore the way forward – but this alone is not enough.
- A farmer growing crops on her smal plot of land doesn't just need credit facilities to buy seeds etc – she also needs help and education to maximise her potential. She needs to know what are the best crops for her land, how best to manage her available resources, how to get her goods to market, and how to protect against crop failure. She needs a business consultant.

Integrated Approach

The financial organs - Insurance

- Insurance penetration in Indonesia is still less than 5% - meaning 95% of the population do not have any form of insurance protection.
- The potential for growth is huge – but this will not happen quickly under the current system.
- Distribution networks for insurance sales are messy, in ineffucient, and under-educated. Regulation of the industry in Indonesia is complex, changeable, and generally perceived to be geared towards protecting the insurance companies rather than protecting the citizens of Indonesia. Perhaps this is because the regulatory body is run by the owners of the insurance companies.

NEW FINANCIAL INFRASTRUCTURE

Integrated Approach

The Financial Organs - Insurance

- This largely result in sub-standard or expensive insurance policies, which do not always offer the protections they promise in their respective marketing material -which in turn result in sub-standard and expensive options for Indonesia's poorest citizens.
- Until now, the main markets for insurance in Indonesia are medica insurance, life insurance, and accident insurance. A quick comparison to products available in some other countries - the developed countries - will quickly highlight just now bad they are.
- Indonesia also needs commercial insurance to become available to the poor -insurance to protect against crop failure being among the most urgently required.

Integrated Approach

The financial organs- Fund Management

- Indonesia's fund management industry is very large -there are nearly 1,000 different registered mutual funds -yet 99% of these all focus on the same things: Indonesian listed bonds. Most of the trading activity which takes place offers little or no economic value -trading volume is high, but the amount of new capital raise dis relatively low. And the capital that is raised is quite often either an exit strategy for the owners, or a refinancing of existing debt, rather than new financial stimulus to the Indonesian economy.
- A huge amount of cash is tied up in inefficient investment funds, which artificially inflate asset prices rather than drive economic growth. We believe that out integrated approach will deliver significant value, not just to investors, but also all citizens of Indonesia.

NEW FINANCIAL INFRASTRUCTURE

Integrated Approach

The financial organs - $ Transfer Services

- One of the simplest financial requirements for many is the ability to send money to someone else -usually back to family in a rural area. Some services already exist for this, but they are expensive. When done digitally, the cost is zero -as long as access to cash or goods/services at the receiving end.
- Indonesia already has a large informal -but effective -network for distributing 'phone credit' for pay-as-you-go mobile telecommunications via small retailers -i.e. a guy selling coffee by the side of the road -and it doesn't take a huge stretch of the imagination to for ease a cashless society in rural areas, once the technology is implemented and distributed.
- Whilst not a specific business in our portofolio, the ability to send money -at no cost -to another person is a fundamental requirement for economic growth, and a core commitment or our business plan.

Integrated Approach - DIGITAL INFRASTUCTURE

The UTOPIA – financial model

- But technologically, once the digital infrastructure is established and operational, there is actually no cost at all -everything can be done electronically. A $10 transaction costs the same as a $1000 transaction -nothing. Yes we need better financial products, and we will develop them. But more importantly, we need a better financial distribution system. Only they can any products, good or bad, reach the full population.
- When looked at from the perspective of a citizen -any citizen, rich or poor -their financial services needs are as follows:
    1. Access to banking facilities to safely store liquid cash and process transactions.
    2. Access to short-term low risk non-liquid financial products, such as fixed interest term deposits.
    3. Access to longer-term, medium risk liquid financial products, such as mutual funds.
    4. Access to insurance products to protect them and their family and/or business. 5) Access to credit to help them engage in profitable enterprise.

NEW HEALTH CARE INFRASTRUCTURE

Prevention is better than Cure

Role of Medical Insurance and Hospitals

Combined Better Medicare and Improve Economics

Medical City and research & development

NEW EDUCATION INFRASTRUCTURE

- Integrated Education Infrastructures
- Subsidize and Provide Online Education
- Workplace Education
- Knowledge sharing and teaching
- In growth-orientated Education infrastructure funds and investments.

NEW HOUSING & URBAN DEVELOPMENT & INFRASTRUCTURE

- Indonesia needs to embark on a massive housing project just to fix this problem -and can use it as as a springboard to drive exports, and therefore increase economic prosperity. By improving housing quality, qualify of family life also improves.
- Advances in technology, coupled with new ways of thinking, pre-fabricated houses, built in sections at factories, and assembled on site, are already common throughout Europe, and are cheaper, quicker, easier, and more environmentally friendly than traditional house-building techniques.
- Funded by either the public or the private sector, house-building factories will create a lot of jobs -ranging from entry-level low skilled labour through high-skilled labour to senior specialist positions.

- Abundant natural resources are already in place. And a huge labour market of primarily young, enthusiastic citizens, with a passion for learning and development, ready to help.
- It's not just Indonesia suffering from housing problem – many countries are also facing the same challenges. If Indonesia can develop this industry and become a world – leader in the sector, the potential export market is huge.
- The current lack of adequate housing is not a problem which will be fixed overnight – but there is a solution which can be started today.

NEW TOURISM INFRASTRUCTURE

- Indonesia already attracts millons of tourist each year, but is nowhere close to fulfilling its potential. The JARI IBU plan contains a number of initiatives to boost the economy through tourism activities.
- SHD Bali
- The SHD (Sang Hyang Dampal) Programcomproses three parts:
    1. Bali Holy-Day in Paradise: Part theme park, part educational centre, and part holiday resort; Celebrating and highlighting the many diverse ways humanity shows their appreciation for God, and promoting peace through understanding different cultures and traditions.
    2. Syahbandar Whis-Sy Port & Resort: A new port and holiday resort, bringing commercial activity and tourism to northern Bali.

3. Batara (Bali Utara) International Airport: A new airport to service North Bali, removing some of the strain of the existing South Bali airport and facilitating easy access to the northern part of this beautiful island.

New Yogyakarta International Airport

- Serving Yogyakarta and the surrounding areas, this much-needed new airport will make it easier to attract both domestic and international tourist to this beautiful and historic area, close to existing historic attractions such as the majestic Borobudur and Prambanan temples.
- The New Yogyakarta International Airport (NYIA) is part of the 'Jogja Green City' initiative (see section 3.5)

NEW TOURISM INFRASTRUCTURE

Medical Tourism

- Through the development of Medical City, Sentul (see section 6.6), we aim to promote medical tourism as a key driver of tourism activity.
- Many potential visitors require specialist care on an ongoing or regular basis, such as dialysis, and whilst they are able to travel, they need access to first class medical facilities whilst on holiday.

Our aim is to provide the facilities and environment to make Indonesia a fantastic choice for vacations for all people of the world, including those with disabilities or illnesses.

NEW TRADE INFRASTRUCTURE

Implementing Export Discipline

- In order to compete internationally, Indonesia needs to improve its productivity and production quality to bring it up to international standards. Whilst domestic consumption will remain the main focus for most domestic businesses, it is only by raising the standards which will enable Indonesia to compete effectively on the world stage, and generate increase wealth.
- Whilst we cannot force all businesses to adhere to this, we can set an example. For our businesses, we will run them with the aim of being among the best -not just the best in Indonesia, but the best globally. It is our hope that others will follow our example, and we believe that by implementing the JARI IBU plan, we will raise the standard, raise the average, and raise the ambition of Indonesia business.

NEW TRADE INFRASTRUCTURE

Developing Specializations

- No country can be the best at everything – and the same is true of Indonesia. However, we can develop our strengths to become leaders in the sectors where we have a natural advantage.
- In addition to the obvious advantages – plentiful natural resources and a large population – there are also many other plus-point.
- Approximately 60% of Indonesia's 255 million citizens are 'millennials' -born in 1982 or later – many of whom are highly tech-savvy and are a key driver of online activity and transactions. Indonesia can, and should, be a leader in the application of online interconnectivity.

- With over 17,000 beautiful islands, immense biological diversity, and some of the most stunning scenery on the planet, Indonesia can become one of the most popular tourist destinations worldwide.
- With huge potential for geothermal and other renewable energy sources, Indonesia can deliver enough power not just for our own citizens, but can also supply its neighbouring countries.
- A quick glance at some of Indonesia's stunning heritage sites, such as Borobodur and Prambanan, demonstrates the high quality of artisanship which has been passed from generation to generation for centuries. Indonesia can – and does – produce stunning art, crafts, and bespoke furnishings.

NEW TAX INFRASTRUCTURE

Now that Indonesia has successfully executed the Tax Amnesty program, it is vital that taxation policy and implementation are modernized to maximize effectiveness and make it a fairer system for all.

Increasing the Tax Base

Currently, out of Indonesia's citizens, only around 27 million - just over 10% - registered as taxpayers, and in 2014 less than one million people paid what they legally owed. 21 this is often cited as a key cause of relatively low taxation revenue flowing to state treasury.

But simply registering new tax payers is not enough. More than 50% of Indonesians currently do not earn enough to reach the tax threshold of Rp 50,000,000 (US$3,750) per year. To increase the tax base, Indonesia also needs to increase the incomes of its poorest citizens.

Chaotic and inconsistent tax collection systems, arcane rules and loopholes, and a lack of reward/punishment for those who follow/break the rules are all part of the problem

It is vital to the health of the Indonesian economy that a fair, transparent and consistent tax policy is implemented and adhered to. New Plan.

A New Perspective to Taxation

Currently, like most other countries, Indonesia operates a system of varying tax rates for different types of economic activity. Individual citizens are taxed on their income -their revenue -whilst corporations are taxe on just their profits.

Where Goods & Services Tax (GST) is added, it is paid for by the end user – usually an individual citizen – yet is consider tax deductible when incurred by a company.

This System is not fair, is not efficient, and is not sustainable.

NEW TAX INFRASTRUCTURE

A Fairer System

- By simplifying the tax system and aligning it with economic activity, taxation revenue can be incrased without harming any currently profitable enterprises.
- Instead of individual citizens just paying taxes on income, and companies just paying taxes on profits, all income -revenue -could be taxed at a very low amount (perhaps even as low as 1%), and all profits (increase in wealth) taxed at a higher amount – but still lower than the current tax bands. Together, this would generate a significant increase in tax revenue for the state.
- If this was implemented alongside a reduction in the applicable tax rates (lower income tax rates for individual, and lower corporate profit tax for companies), it would reward profitable value-adding companies, and penalize value-destroying companies who have a high turnover but declare low profits, and therefore currently pay little or no tax.

- Any economic trading activities would be taxed – every time an asset changes owner, whether that is a house being sold from individual to another, a shipment of produce from a farmer to retailer, or sheets of metal being purchased by a factory – at a very low rate, therefore ensuring that the state receives a small payment from every transaction, not just a cut at the end if all this activity was profitable (and if reported, and if collected).
- It would then be possible to bring the tax bracket for individuals and companies in line – there really is no justification for an individual citizen to pay a higher rate of tax than a company. It's only that way because that's the way it was yesterday – but we need a plan for tomorrow, today.
- A simple and fairer system for everyone means that every – individuals and corporations – pay one fixed rate of tax based on revenue (economic activity), and one fixed rate of tax (which could include the progressive banding structure) based on any increase in wealth (profit).

NEW TAX INFRASTRUCTURE

Improved Collection of Taxes

The current tax collection setup is woefully under-resourced, unnecessarily complex, and not fit for purpose. Simplifying the tax rules would make it easier for individual and companies to adhere to, and utilizing technology for calculating, reporting, and paying taxes would make it quicker, easier, and cheaper - resulting in higher efficiencies and therefore higher tax revenues.

Paper-based systems spread across multiple physical offices provide easy cover for corruptors, are difficult to track and examine, and in cases of dispute lead to legal challenges lasting several years. This is madness. It's time to reform.

Improved Spending of Taxes

Indonesia's infrastructure capacity is in desperate need of expansion and upgrading, which is a key objective of the JARI IBU plan.

Key Aims

Through our infrastructure program, we aim to put in place the following basic provisions across the archipelago:

1. Access to affordable energy for all Indonesians.
2. Access to the internet and telecommunications for all Indonesians.
3. Access to banking and insurance services for all Indonesians.
4. Access to quality healthcare for all Indonesians
5. Transportation capacity to allow our cities to operate effectively, such as MRT.
6. Increased airport capacity to take the strain off exisiting airports and allow for new domestic routes.
7. Increased port capacity to help get Indonesian products to international markets

NEW DIGITAL INFRASTRUCTURE

Indonesia's infrastructure capacity is in desperate need of expansion and upgrading, which is a key objective of the JARI IBU plan.

Funding Digital and Smart City Infrastructure Development.

Whilst some of the above are to be funded directly through the Suryawukukala program, we will work with the government of Indonesia, the domestic and international private sector, and international development agencies such as the UNDP, ADB, IMF and the World Bank to facilitate further investment to strengthen the Indonesian economy.

Our position makes us ideally placed to help bridge the gap between private and public sector requirements, and forge a new path for public private partnership which go above and beyond the current best practices.

Indonesia's infrastructure capacity is in desperate need of expansion and upgrading, which is a key objective of the JARI IBU plan.

The Importance of Digital Infrastructure

Often a lot of emphasis is placed on physical infrastructure – which is of course desperately required – but we also need to make sure that our digital infrastructure is up to international standards to be able to compete and trade with other countries, and get all Indonesian citizens on the path to economic prosperity. More details of our digital infrastructure plan are included in a separate document.

First Class Infrastructure for a First Class Economy

For Indonesia to reach its potential and become a top 5 economy, we need to set the bar high in terms of installed infrastructure capacity in every key aspect. All of our infrastructure plans include the most modern technological advances available and great care is being taken to ensure that as technology continues to advance, our projects are able to be update at minimum cost and minimum disruption too.

$10B BG FINANCING STRUCTURE

Financial regulatory and project management via Si TRUST of local companies and Banks.

Idigital Group:
Service Platform for Trust on Cloud ICT & Finance Infrastructure & Online Bank & Project Mgt for Int'l economic development.

THE FAMILY OF FUNDS

OVERVIEW

- Infrastructure funds provide the opportunity to invest in essential public assets, such as ICT Infrastructure, Transportation Infrastructure such as toll roads, airports and rail facilities. And others such as Water, Seaports and Airports, etc,...
- They are often attractive to investors looking for predictable returns, as infrastructure project are typically characterised by low levels of competition ang high barriers to entry. Some have the prices they charge subject to government regulation, with price increase requiring approval.

- Returns from infrastructure funds usually combine capital growth and dividend income in varying proportions.
- In growth-orientated infrastructure funds, there may not be stable income in the near term but the fund sekks to achieve capital growth in the medium term. Infrastructure funds that generate steady income streams tend to invest in more mature assets.

FUNDS OVERVIEW

Funds project through a specified FUND for each industry.

Infrastructure & Transportation Fund:

Invest in mobilization of people thru high tech infra structure & transportation initiatives.

Agriculture Fund:

Bring state of the art farming technology to indigenous farmers. ATLAS Commercial Bank could provide financial assistance for payment to farmers.

Healthcare Fund:

State of the art medical facilities and medical technology funding.

Tech Advancement Fund:

Engage in the development of distruptive technologies that will support the future growth of the countries in which they are deployed.

Construction & Dev Fund:

Housing, hotels, etc.

Natural Resource Fund:

Development of natural resources.

Advanced Energy Fund:

Deployment of distruptive energy technology. Solar, next generation battery and storage technology etc.

VENTURE PARTNERS & INV BANKER

VIIF-Venture Partners ("VIIF-VP") is an independent financial and strategic advisory platform based in New York(NY) and San Francisco (CA). The firm's clients include businesses and institution globally.

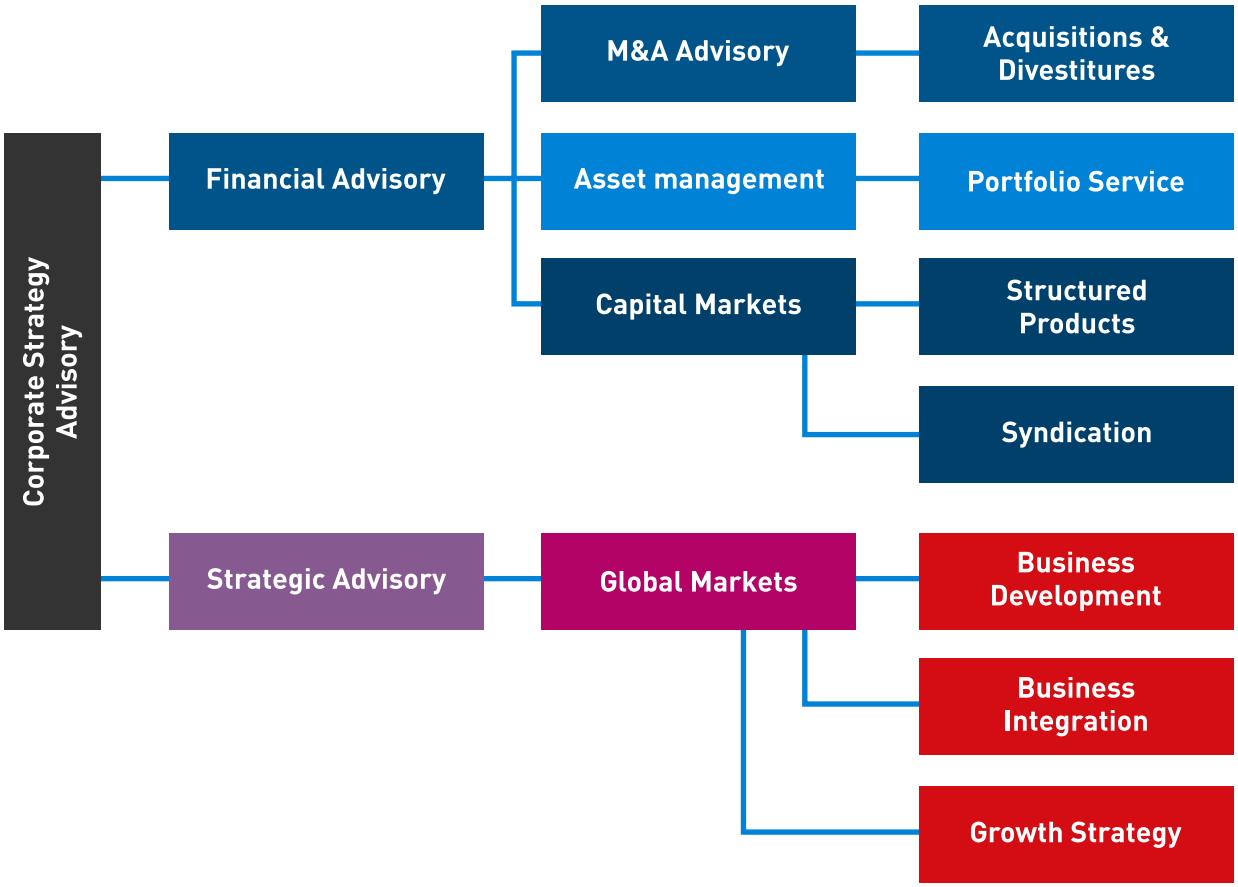

The firm provides financial & strategic advisory services to the following sectors:

- VIIF-VP works with its clients by providing deep functional and industry experts offering deep industry relationship with the determination and dedication to best serve clients and to generate long-term value for all stakeholders. The underling aim of the firm is to offer the best services for our clients globally.
- The firm has strong relationships with global financial firms to provide strategic advisory to clients, including – global bank, sponsors, investment funds, UHNW investors, and financial institutions in the public sector. Additionally, the firm has strategic partnerships with world class law firms, human resources and public relations firms.

VIIF-VP's SERVICES

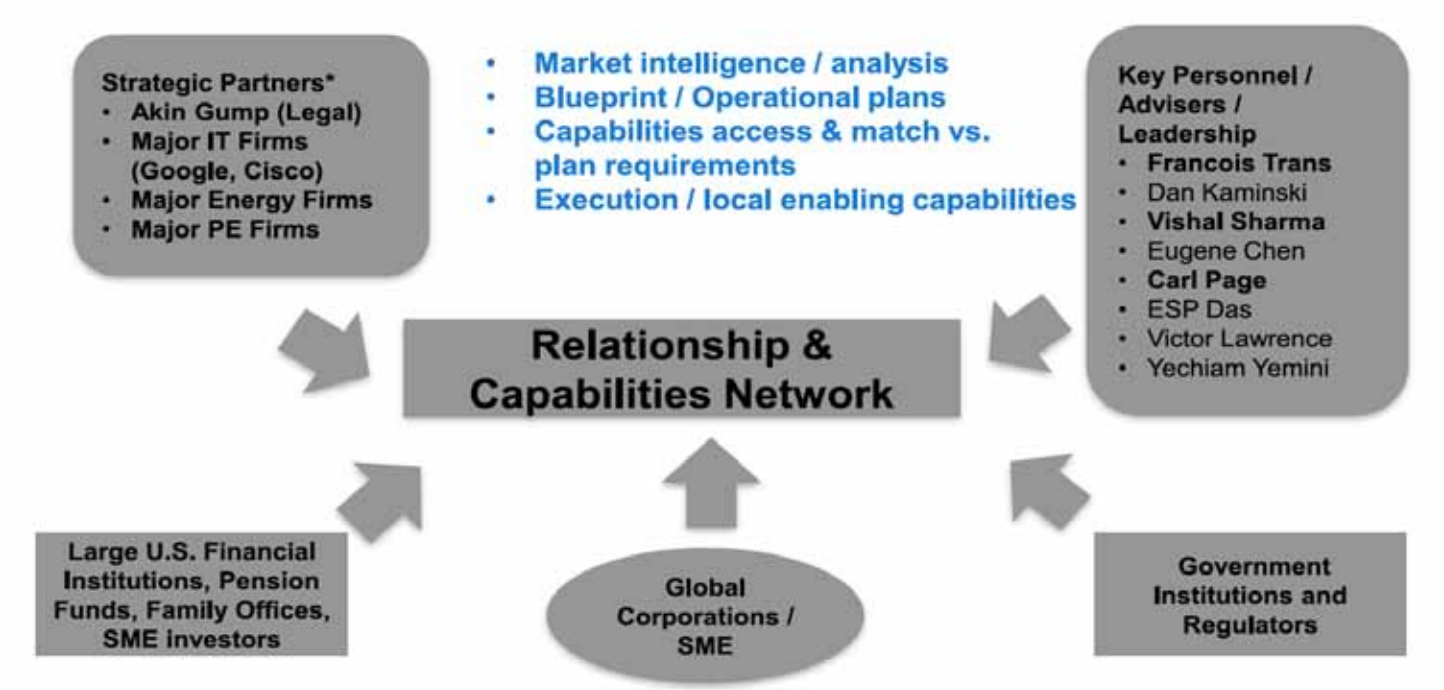

The range of financial services that VIIF-VP provides to clients, includes:

VENTURE PARTNERSHIP STRUCTURE

Strong relationship network:

- **Providing international clients with the ability to execute and grow, by providing professional and deep access to the global consumer and financial markets.**

PARTNERSHIP STRUCTURE (Case Study)

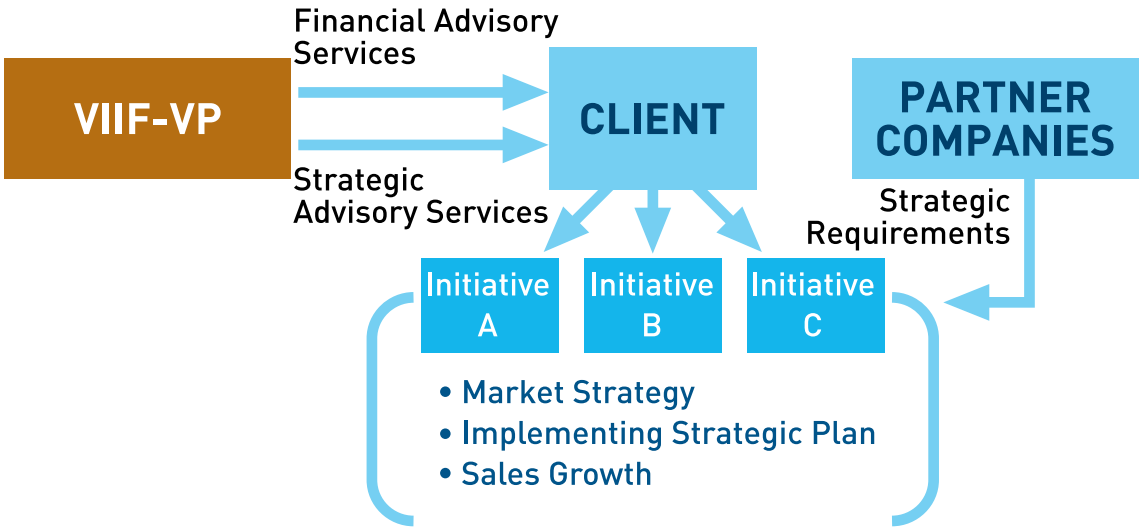

The Proposal

- To meet the Client goal, VIIF-VP proposes a 'joint command structure' with the following strategic and financial advisory services to the Client:
- VIIF-VP provides critical market intelligence, advisory services, capital sourcing, due diligence and M&A advisory services to the Client.
- VIIF-VP, along with its affiliates, provides complete end-to-end services on growth strategy, legal and advisory services to help the Client grow globally, based on preset guidelines and milestones.
- VIIF-VP will provide the necessary on-the-ground execution support to the client.
- VIIF-VP will incorporate high governance and transparency standars required by the Client's Board and Management team.
- VIIF-VP will deliver these services to the Client with the support of VIIF-VP's network of partners and advisor.

Advantages of Structure

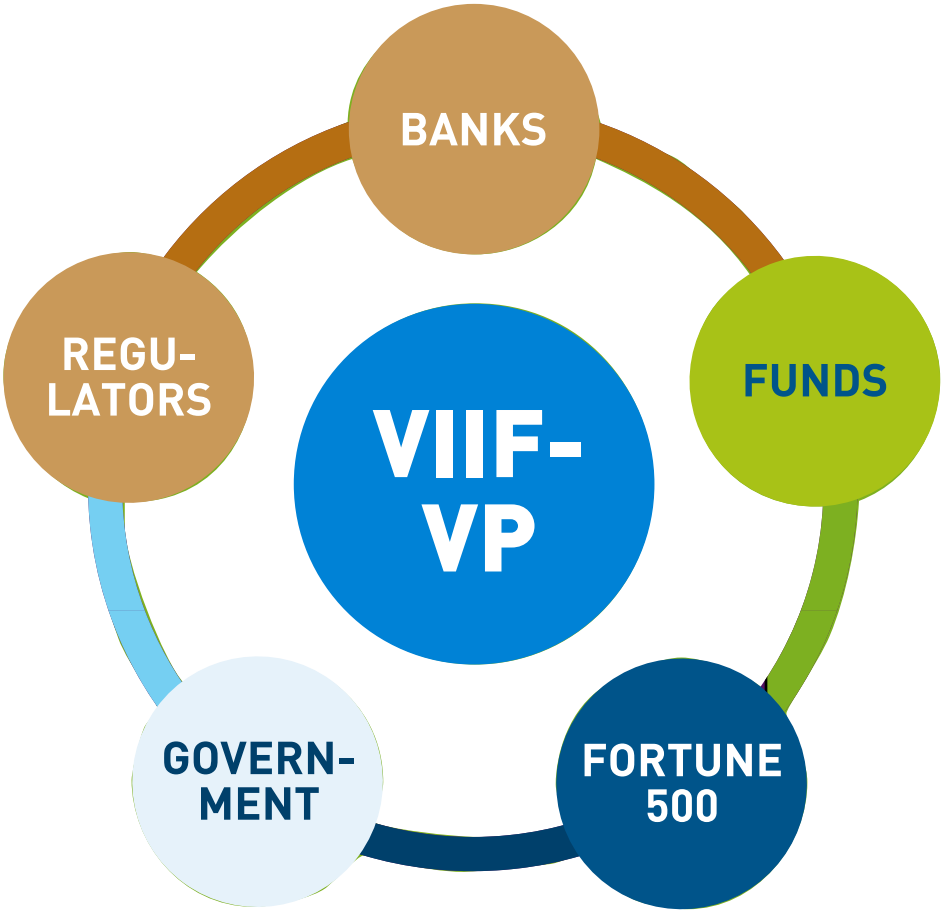

- **VIIF-VP helps the Client grow and pursue opportunities globally-offering access to an unparalleled ecosystem of large strategic and investment partners.**
- **The Clients obtain access to multiple opportunities across the desired sector and gains strong access to the major global financial and corporate markets.**
- **Attractive, focused approach for the Client to evaluate growth strategies globally.**
- **Joint team structure offers collaborative experience – aligning short-term and long term interest of both parties – with no conflict of interest.**
- **Strong governance and partnership standards focused on meeting the Client's goals.**

Illustrative Examples

ECOSYSTEM

VIIF-VP has an unparalleled ecosystem with the key companies to help Client grow.

BANKS	Largest financial institutions, pension funds and global banks.
FUNDS	Leading global investment funds, PE funds, endowments, foundations.
Fortune 500	Leading companies focused on strategic tie-ups globally.
GOVERNMENT	Multiple government agencies with strong outreach programs.
REGULATORS	Multiple regulatory agencies to help analyze growth prospects and evolve Client startegy.
SME	Global SME community and key investor participants in the community

SELECT CURRENT INITIATIVES

- Providing strategic advisory services to Asian firm looking to expand operations globally including raising strategic long-term capital from Asia.
- Providing key advisory services to a large USA firm looking to expand product and service offerings globally.
- Working with 2 large European banks on several strategic initiatives, related to growth new markets globally.
- Advising a large Indonesia electric utility on strategic initiatives with US utilities, related to working with financial institution on large scale capital investment required for such projects.
- Advising large Nusantara Indonesian family on investment management strategies, including advisory services related to strategic M&A opportunities globally.

VI CAPITAL KEY VENTURE PARTNERS TEAM MEMBERS

The principals at VIIF-VP are highly experienced and have developed key relationships globally that help the firm's clients achieve their objectives.

Francois Trans (Partner)

Francois Trans brings over 25+ years of High Tech experienced in Telecom & Networking most recently as CEO at Sapphire Communications where he grew global operations to over 200+ employees.

As Managing Director/CFO of boutique Early Stage Venture fund Satellite Integrated Electronics (SIE) Mr. Trans leveraged his expertise in identifying new high growth emerging opportunities to successfully raise over $50M from Tier 1 Institutional Investors such as Goldman Sachs and Redwood Ventures in the funding of 4 companies with a combine value of over $300M.

His success over the last 20+ years at the C level are a result of his demonstrated experience in assembling world class teams and his ability to drive the delivery of solutions. Mr. Trans holds a BS in Math Computer Science, an Exec. MBA from Stanford and has filed many patents.

Dan Kaminski (Partner)

Dan has over 25 years experience building relationships and advising multi-national corporations across key industry sectors on financing growth, restructurings and other strategic initiatives.

Dan has forged core strategic partnerships with Cisco and Google in acquisition, financings, business opportunities, and investment.

Previously, Dan served as Managing Director and CEO for Marco Polo Group' European operations.

Additionally, Dan was a Director of venture financing at Lucent Technologies, in partnership with DARPA and a Director of Hamilton Parker, where he oversaw the creation, strategy and project management of a broad portofolio of clients, including Sony's Semiconductor business operations in Europe.

Dan sat on Her Royal Majesty Queen Elizabeth II's Investment and Grants Committee New Technologies in Thames Valley and additionally, served as advisor to the Israeli Finance Minister of North America.

Vishal Sharma, CFA (Partner)

Vishal has over fourteen years of investment banking, M&A advisory and fund management experience.

At Lehman Brothers, he helped raise $40+ billion dollars in sovereign / corporate debt and equity securities across US, Europe and Asia.

He was involved in the formation and built out of Saffron Capital Fund – a U.S.- India fund (cumulative AUM $500mm+), focused on the SME sector.

With his network of investor relationships in Asia / Middle East, he helped raise and invest ~ $200mm for the fund with defined exist resulting in investor IRRs of over 23%.

Served as a Managing Director with Marco Polo Securities investment banking practice, specializing in global investment banking and M&A advisory transactions.

Eugene Chen (Partner)

Business development advisor with more than 20 years of experience in international business development, marketing, manufacturing and materials sourcing.

Was a founding team member in the development of the concept and business plan for ViNetworks, a next generation data center project in Vietnam.

Industry consultant for a handheld digital media player and the development of the operating team and product marketing.

Consulted for early stage pharmaceutical companies, electronics, avionics, satellite navigation equipment manufacturers and others in development of relationships in Asia and Europe.

Strategic manufacturers expertise combined with practical execution and development of local resources has been the focus of a global consulting practice.

GREATER JAKARTA MASS TRANSIT SYSTEM (GJMTS)

Consortium Development

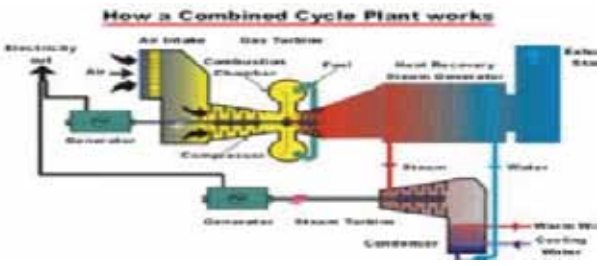

We Take this opportunity to introduce ourselves, as a consortium comprised of some of the leading construction management, power and sustainable energy developers in the world. We are herewith attaching for you review our company profiles and understanding of projects leaders, Jacobs/Fluor as design partners, Bechtel/Leighton as CM partners and GE/NAES as operations partners. These groups are industry leaders in United States and globally, having combined annual revenues of more than US$100 billion. The consortium members have been selected based on past experience with projects similar to this and consistent successful track records. This project is what we do and have been doing successfully for other clients across the globe.

Experience:

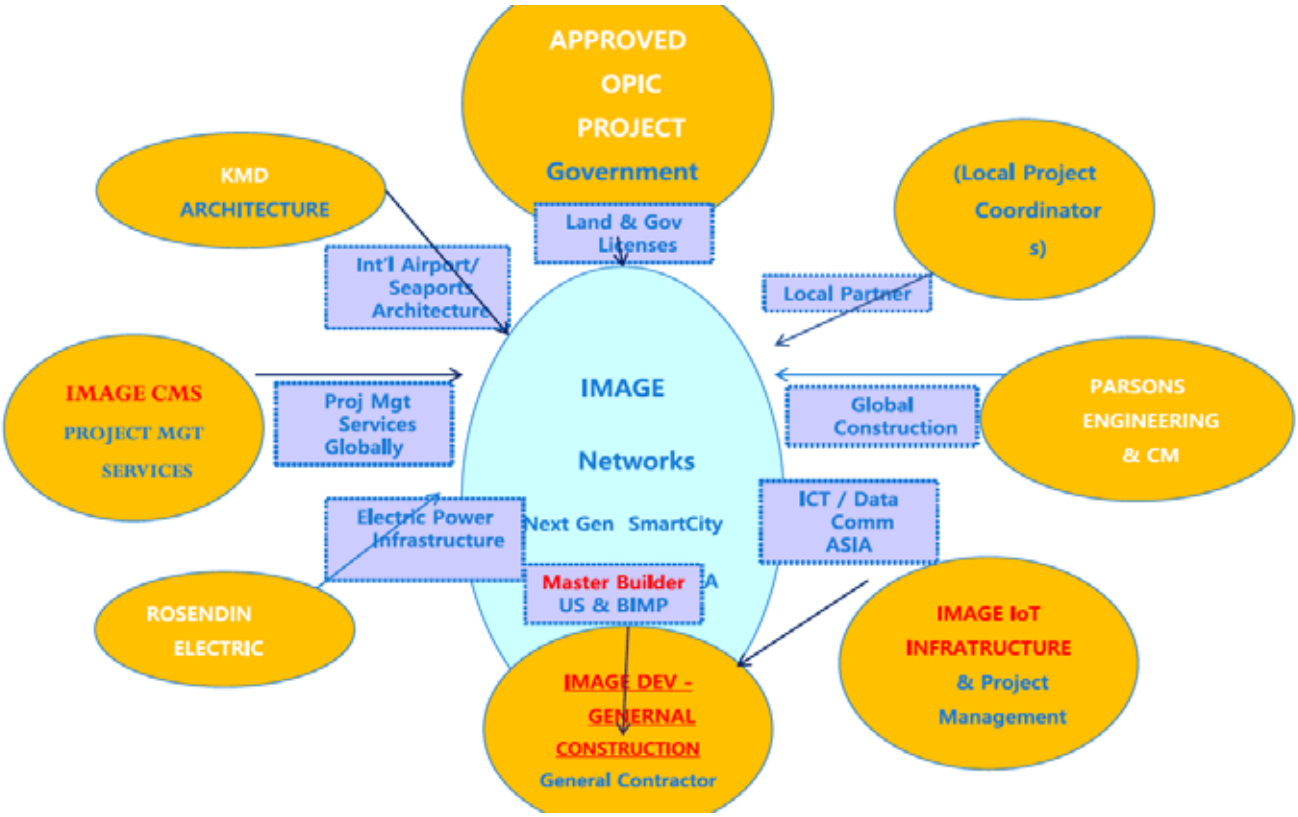

Our firms have over 200-hundred years of combined experience, and are some of the largest speciality contactors, operators and consultants in the United States and globally. With this, our focus has been in infrastructure, transportation, wind farms, commercial building, green energy, as well as other highly technical power generation projects such as yours.

Our team has vast experience in undertaking and completing such mega project in Power generation, Transmission and distribution successfully. We have outlined options for each role for consortium members in the event certain firms are a better fit for the overall program We also wish to allow input from Delta Power and the end users that will ultimately own the project once complete.

LEGAL STRUCTURE

For Each SPV P3

SPV Project Finance Structure

P3 SPV SUCCESS KEY ELEMENT

Major success factor :

1. Sustained political support to the project at national level
2.Adequacy of legal concession frame with international standards
3.Realistic assessment of the investment cost and/or of the revenues of the Infrastructure at the 'feasibility' stage
4.Past experience of the country for such projects
5.The conceding authority (Local Gov) must have the financial capacity to support the project
6.Well-balanced risk sharing between the conceding authority (Local Gov) and the concessionaire (IMAGE Dev & Management)
7.Strong committed , experienced, international and local partners for construction, operation, and financing
8.Limited number of partners at Concession and EPC levels

ViDev has a large system engineering team which guarantees
1. Co-ordinated turnkey design team integrating each IT subsystem
2.Selection of products and solutions to optimize the Life Cycle Costs
3.Sophisticated RAMS (Reliability Availability Maintainability Safety) simulation team and tools
4.Planning optimisation reducing construction time

P3 SPV
PROJECT EXECUTION
Summary

- **Development of major P3 Projects takes couple years in development, finalizing the project parameters & acquisition of land. Projects are quite often not able to assess the correct level of $ traffic. It is important to provide for Project expansion or other mid-course correction. A good option, from point of view of continuity, is to ask the current concessionaire (IMAGE/ADK Dev) to make such expansion.**

PROJECT WILL HAVE SIGNIFICANT TRADE DEV IMPACT

1. Bringing higher standards of Architecture & Designs with Smart ICT Trade Media Center infrastructure and services to local, national and international clients & companies, thus facilitating the implementation of efficient infrastructure and best practices with solutions for immediate vertical markets such as Universities and Hospital and Convention Ctr Operators.
2. Supporting new and independent companies, in xxEZ, in rolling out operations in frontier regions in Indonesia, such as in a Jakarta (North), Bandung(Middle), Surabaya(South), thereby providing quality, sodt effective, and secure Smart ICT Trade Operations with Certified Cloud Based Internet datacenter facilities for local businesses whose operations may be vastly improved in Indonesia.
3. Demostrating to other domestic players as it is the first company to provide quality services and infrastructure of SMART ICT Economic Trading Zone that are compliant with int'l Standard in Architecture, Design and construction & Mission Critical standards to support advanced operations.
4. Providing world-class infrastructure and connectivity to specific BIMP and GMDR geographic areas & to enable companies that need smart ICT services to operate, especially given that ICT infrastructure and Trading penetration is not uniform in developing countries such as in Vietnam, Cambodia.

AMBARA INANIA

Amanat Kebahagiaan Rakyat Indonesia Dan Dunia

The Mandate of The Blissfulness of People of Indonesia And The World

Saudara-saudara sekalian,

Founding Fathers kita, Bapak-bapak Bangsa kita, telah menyusun Undang-undang Dasar 1945. Dan di dalam Undang-Undang Dasar 1945 termaktub satu niat besar, satu keinginan besar, satu tekad besar yang bulat kuat, yaitu turut bersama di dalam menciptakan perdamaian di dunia. Dan oleh karena itu, kita jawab saat ini, di generasi kita ini, itikad dan kebulatan tekad tersebut, niat yang terkandung di dalam falsafah negara kita tersebut.

Ladies and Gentlemen,

Our Founding Fathers, our Nation Fathers, have formulated The National Constitution 1945. And in the National Constitution 1945, stated one great determination, one great will, one strong determination, that is to contribute to the implementation of lasting peace. Therefore, we answer that at this moment, in our generation, that faith and determination, the determination which contained in the nation's philosophy.

Dan dalam hal ini, oleh karena sikap, prinsip di dalam turut serta menciptakan perdamaian abadi di dunia yang bebas aktif, yang bebas mengerjakan kebijakan, yang bebas menentukan kebijakan luar negerinya, dan dalam hal ini kebijakan luar negeri kita adalah kebijakan yang membangun, yang membawa manfaat besar untuk perkembangan geopolitik internasional. Dan di dalam peran sertanya yang aktif untuk bebas aktif tersebut, maka kita menginisiasi dan inisiasi ini adalah sebagai jawaban atas rencana, atas kebulatan tekad, atas perjuangan yang telah dibangun oleh para Founding Fathers kita, para pendiri negara Republik Indonesia. Dan jawaban ini kita maklumatkan dengan nama Indonesia dan Dunia Investment Summit.

And in this matter, because of the attitude, the priciple in contributing to the lasting peace in a free and active world, free to implement policy, free to determine its foreign policy, and in this matter our foreign policy is a policy that constructs, that brings great advantage to the international geopolitical development. And in its active participation to be free and active, we initiate and this initiation is an answer to the plan, the strong determination, to the struggle that has been established by our Founding Fathers, the Founders of the Republic of Indonesia. And we proclaim this answer by the name "Indonesia & World Investment Summit".

Di dalam investment summit ini, memiliki misi dan visi dimana negara-negara maju kita arahkan untuk membangun dan mendorong berkembangnya negara-negara terbelakang dan menjadikan negara-negara berkembang menjadi negara-negara yang maju. Tidak ada Blok Barat, tidak ada Blok Timur, yang ada adalah kemajuan bersama. Dan kemajuan bersama ini adalah salah satu tujuan Undang-undang Dasar 1945 kita turut serta dalam menjaga ketertiban dunia dan mencapai perdamaian abadi manusia dan ini juga adalah menjadi misi Perserikatan Bangsa Bangsa.

In this Investment Summit, we have a mission and vision where we direct the developed countries to construct and encourage underdeveloped countries to become developed countries. There is no Western Block, there is no Eastern Block, all we have is common progress and improvement. And this common progress and improvement is one of the goals in our Nation's Constitution of 1945 to contribute in the implementation of a world order and achieve lasting human peace and this is also the mission of the United Nations as well.

Takkan pernah ada yang akan menghentikan jalan resolusi untuk Indonesia dan dunia, sebab selain Indonesia adalah bahagian daripada warga di dunia, namun juga karena jalan ini adalah bukan jalan saya, bukan jalan kamu, bukan jalannya golongan tertentu, bukan juga jalan kelompok tertentu, akan tetapi jalan ini adalah jalan Bangsa Indonesia, jalannya bangsa-bangsa di dunia. Dan sumberdaya yang diberikan oleh Allah SWT, Tuhan semesta alam ini, sangatlah cukup untuk membangun tatanan dunia baru yang lebih adil dan beradab. Tapi, tidak cukup untuk satu orang yang rakus. Oleh karena itu, kita deklarasikan satu agenda nasional yang support kepada agenda internasional yaitu INANIA Investment Summit dalam Agustus 2021.

There will not be something that stops the resolution path for Indonesia and the world, because beside Indonesia is a part of the world, and also that this path is not my path, is not your path, not a particular class path, and not a particular group's path, but this path is the path of Indonesia Nation, the path of the world's nations. And the resources that are given by Allah SWT, God of this universe, is abundantly enough to establish a new world order that is more just and civilized. But, it will not be enough for one greedy person. Therefore, we declare one national agenda which supports to the international agenda: INANIA Investment Summit in August 2021.

Terima kasih atas dukungan, kebulatan tekad, niat suci dan atas keyakinannya kepada takdir Tuhan bahwa Indonesia adalah negara yang dapat memberikan sumbangsihnya kepada dunia, saya ucapkan terima kasih.

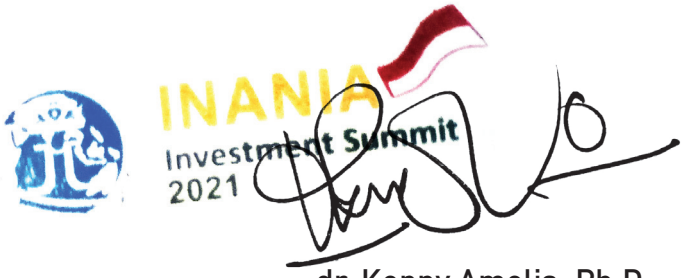

Salam menuju Indonesia Jaya!...
dan dunia sejahtera.

Jakarta, 14 Februari 2021

Thank you for support, strong determination, pure intention and faith to the will of God that Indonesia is a country that contributes to the world, I thank you very much.

Greetings towards Glorious Indonesia!...
and a prosperous world
